FOREWORD

The National Statistics Office (NSO) is presenting the results of the 2015-2016 Household Budgetary Survey (HBS) which was carried out between April 2015 and March 2016. The HBS is conducted among private households and is the second of its kind in Malta since the adoption of the euro in 2008. The survey is distinctive in the sense that it is diary based, where participating households keep a detailed diary of expenditure over a period of two weeks. The methodology used is in line with European guidelines. This ensures the production of harmonised results which are comparable to similar official data relating to other European countries.

The primary scope of the HBS is to illustrate patterns in household expenditure and how these fluctuate among different goods and services. By comparing these patterns with those derived from the previous HBS, one can appreciate changing trends in expenditure within society. For example, results from the 2015-2016 survey show that, compared to 2008, the average household spends less of its share of total household expenditure on food. As expected, however, the total expenditure on this component remains substantial, at 19.8 per cent. On the other hand, in percentage terms more is being spent on transport, clothing and footwear, education, and restaurants and hotels.

The HBS is a wealthy source of data that can be used to compile a range of socio-economic indicators, which can in turn be used to monitor and support social policy. These official statistics are of interest to a diverse group of users: policy makers, academia, researchers, the media and the wider community. Furthermore, patterns of household expenditure emerge from the HBS findings; these are used to update the weighting base of the Retail Price Index, and in the compilation of Malta's national accounts. Apart from collecting detailed information on household expenditure, the HBS collects background socio-economic information on households and their members. This allows for comparison of expenditure patterns from the lens of different characteristics, such as household type and tenure status. Information is also collected on sources of household income and on an array of household facilities, which affords an opportunity of examining the changing face of Maltese households along the years.

I take this opportunity to thank all those who made this project possible, notably the Malta Statistics Authority and Mr Reuben Fenech, outgoing Director General. My gratitude is also due to all the staff at NSO who steered the HBS project from inception through to publication. Additionally, my sincere appreciation goes to all the households whose time, co-operation and important information were instrumental to the success of the project. Indeed, the published results are the fruit of this valuable co-operation.

ETIENNE CARUANA

Acting Director General

January 2018

01

SALIENT RESULTS

This chapter explores the most prominent aspect of the Household Budgetary Survey, where a categorical breakdown of the most significant aspects of spending is given. Prominent expenditure on specific categories such as housing, food and beverages, transport, and communication are explored, and information is provided according to several demographic variables such as age, education, and sex among others.

Introduction

The total annual household expenditure of Maltese private households in 2015 was estimated at €3.7 billion. This amounts to an annual average of €22,346¹ per household, which is 14.2 per cent higher than that estimated in HBS 2008.

Table 1.1. Average household weekly expenditure by expenditure category: 2008, 2015

	Average per week: 2008 (€)	Average per week: 2015 (€)	Percentage Change (%)	% Total: 2008 (%)	% Total: 2015 (%)
Food and non-alcoholic beverages	85	85	0.4	22.5	19.8
Alcoholic beverages and tobacco	9	10	9.4	2.5	2.4
Clothing and footwear	27	34	26.6	7.1	7.9

Restaurants and hotels	27	36	34.5	7.1	8.3
Miscellaneous goods and services	35	47	34.2	9.2	10.8
Total Expenditure	376	430	14.2	100.0	100.0

Food and non-alcoholic beverages remained the largest proportion of total household expenditure, at 19.8 per cent in 2015. On average, households spent €4,417 on this category of goods in 2015, which amounted to just under €85 per week. The second largest category of expenditure in 2015 was Transport (which includes fuel expenditure, air fares, purchase of vehicles, and ferry tickets), with an average annual expenditure of €3,181 during the reference year, translating to a weekly expense of €61.18. This category commands 14.2 per cent of the total household expenditure. The lowest share of expenditure, both in 2008 and in 2015 was on Alcoholic beverages and tobacco, with a percentage total of 2.5 per cent and 2.4 per cent respectively.

1 Calculation of this figure followed from the definition of consumption expenditure in the Methodology section (Appendix A).

Education experienced the highest expenditure increase between 2008 and 2015, with households spending 82.4 per cent more on this category in the latter year. Furnishing, household equipment and maintenance experienced the only expenditure drop between 2008 and 2015, with households spending 4.6 per cent less on this category in 2015.

Chart 1.1. Expenditure distributions by expenditure category: 2008, 2015

Total household expenditure was the lowest in the Southern Harbour district and Gozo and Comino, with households in those districts spending an average of €363 and €372 weekly, respectively. Households in the Western and Northern districts spent the most, at an average of €495 and €472 weekly, respectively. The average weekly expenditure for households in all districts stood at €430. Households in the Northern Harbour, South Eastern, Western, and Northern districts spent more than the national weekly average, while households in the Southern Harbour, and Gozo and Comino spent below the national average line.

Chart 1.2. Average weekly household expenditure by district: 2015**Table 1.2. Average yearly household expenditure by district and expenditure category: 2015**

	Southern Harbour (€)	Northern Harbour (€)	South Eastern (€)	Western (€)	Northern (€)	Gozo and Comino (€)

Average Yearly Expenditure	18,884	22,507	22,525	25,764	24,528	19,350

Food and non-alcoholic beverages

On average, annually households spent more on Food and non-alcoholic beverages than any other category, in both 2008 and 2015. The two expenditure categories contributing mostly to this component in 2015 were meat, with households spending an average of €930; and bread and cereals, with households spending an average of €727. On the other hand, in 2015, households spent the least on oils and fats, spending an average of €120; and coffee, tea and cocoa, spending an average of €116.

When comparing the average annual expenditure of the categories under Food and non-alcoholic beverages in 2015 to that of 2008, it can be noted that the main monetary increase was in the fruit category, which increased from €318 to €439 per year. However, expenditure on mineral waters, soft drinks and juices, as well as bread and cereals, decreased by €85 and €83 respectively.

Chart 1.3. Average annual household expenditure on Food and non-alcoholic beverages: 2008, 2015

When considering the average expenditure on Food and non-alcoholic beverages by household size in 2015, a sharp increase can be observed between one-person households and two-person households, amounting to €1,773. This increase is diminished when comparing households of larger sizes, with a maximum increase of €970 being experienced between households with three members and those with four members.

Chart 1.4. Average annual household expenditure on Food and non-alcoholic beverages by household size: 2015

When comparing Food and non-alcoholic beverage expenditure between 2008 and 2015 by district, the largest decrease was recorded in the South Eastern district (7.8 per cent). On the other hand, the largest increases were recorded in the Northern district (8.8 per cent), and Gozo and Comino (6.0 per cent).

Chart 1.5. Average annual household expenditure on Food and non-alcoholic beverages by district: 2008, 2015

Alcoholic beverages and tobacco

Alcoholic beverages and tobacco remained the smallest proportion of total household expenditure, at 2.4 per cent in 2015, a slight decrease over the 2008 share, which at the time stood at 2.5 per cent. In 2008, households spent an average of €480 on this category. Of this amount, €329 was spent on tobacco, meaning 68.5 per cent of the expenditure on Alcoholic beverages and tobacco was allocated to tobacco alone. In 2015, this share decreased, with €335 out of the €525 spent annually on Alcoholic beverages and tobacco being allocated to tobacco. This resulted in a decrease of 4.7 percentage points in the allocation of tobacco as part of this category, down to 63.8 per cent.

On the other hand, there was an increase in the share of annual expenditure on wines and spirits from 2008 to 2015, while the expenditure on beer decreased by 1.2 percentage points. However, this category does not include expenditure on alcohol consumed in restaurants.

Chart 1.6. Percentage distribution of annual household expenditure on Alcoholic beverages and tobacco: 2008

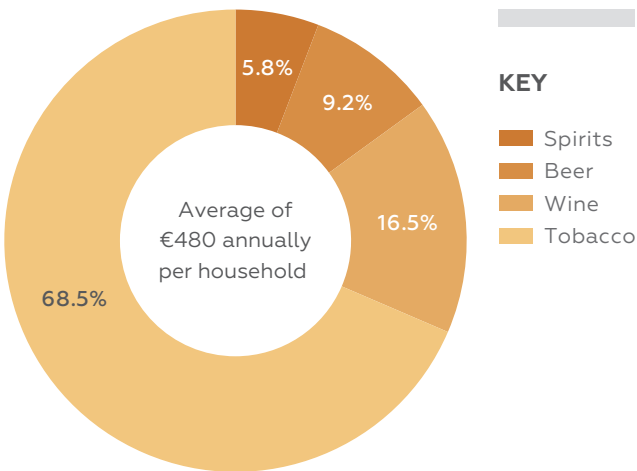

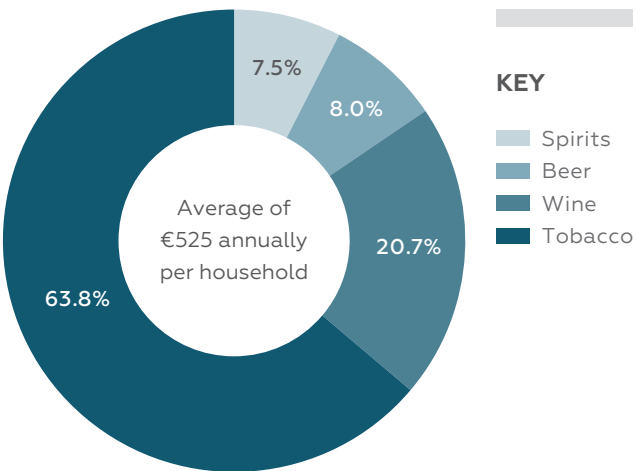

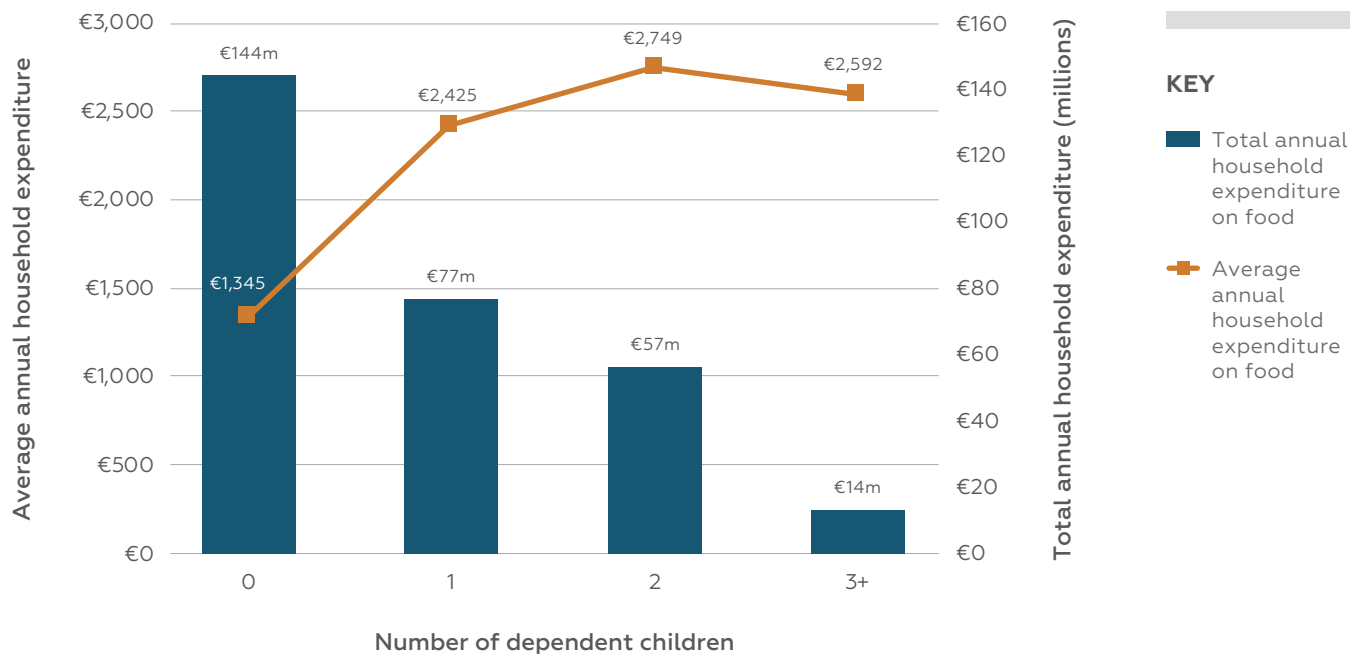

Chart 1.7. Percentage distribution of annual household expenditure on Alcoholic beverages and tobacco: 2015

Clothing and footwear

When comparing the expenditure on Clothing and footwear between households with different numbers of dependent children, it can be observed that a household with at least one dependent child spent significantly more on this category than a household without any dependent children. However, for all households that have dependent children, the increase in the number of dependent children does not have any major effects on the average yearly expenditure on Clothing and footwear of such households.

Chart 1.8. Expenditure on Clothing and footwear by number of dependent children

In 2015, households spent more, on average, on this category than in 2008, by €371. In both years, the sharpest increase in expenditure can be observed between household sizes of two and three persons. Households with three members recorded the highest increase in their expenditure from 2008 to 2015, by 49.0 per cent, followed by two-person households which registered an increase of 46.0 per cent.

Chart 1.9. Average annual household expenditure on Clothing and footwear by household size: 2008, 2015

Dwelling-related expenses

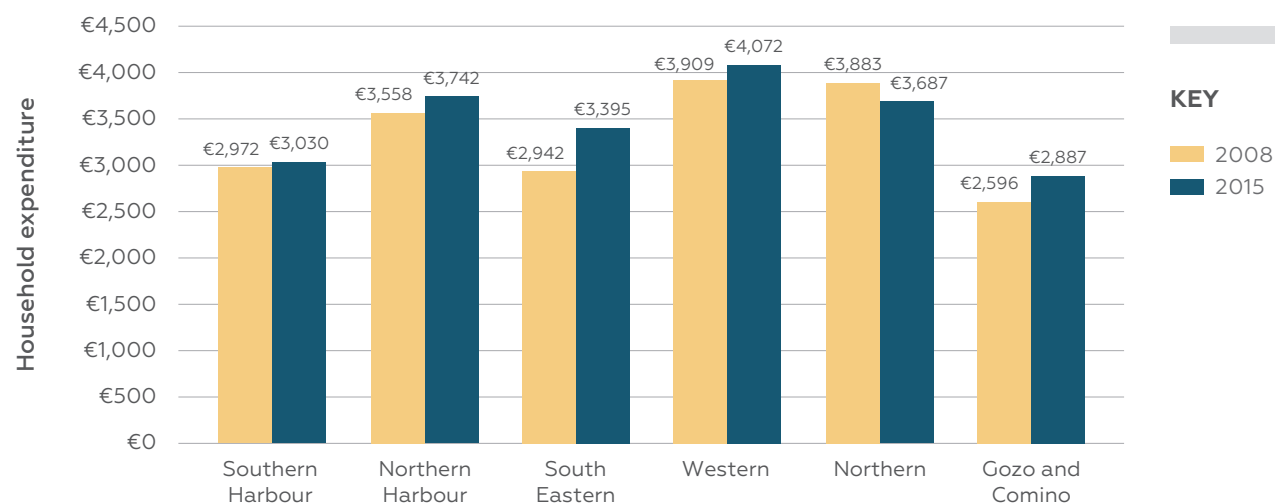

Dwelling-related expenses can be subdivided into Housing, water, electricity, gas and other fuels and Furnishing, household equipment and maintenance. These two categories contributed to 8.4 per cent and 7.4 per cent of the total annual household expenditure respectively. This means that dwelling expenses account for 15.8 per cent of the total household expenditure. This expenditure does not include expenditure on dwellings that are used for business purposes.

Households residing in terraced houses were the only group of households which spent more, on average, on Furnishing, household equipment and maintenance (€1,750 per year) than Housing, water, electricity, gas and other fuels (€1,695 per year). Households residing in other types of dwellings (such as boathouses, caravans, garages, etc.) spent relatively more, on average, on Housing, water, electricity, gas and other fuels, with households residing in flats or penthouses spending significantly more on the latter (by €653).

Chart 1.10. Average annual household expenditure on housing and furniture by type of main dwelling: 2015

In both 2008 and 2015, expenditure on housing and furniture was highest in the Western district. In 2015, expenditure on housing and furniture increased in all districts except the Northern district. The South Eastern, and Gozo and Comino districts registered the highest increases in expenditure in this connection, by 15.4 per cent and 11.2 per cent respectively.

Chart 1.11. Average annual household expenditure on housing and furniture by district: 2008, 2015

Health

The national average annual expenditure on Health (a category which also includes doctor's fees and medicines) stood at €1,252. On average, households whose reference person² was aged over 45 spent above this national average. On the other hand, households whose reference person was under 45 years of age spent less than the national average, on average. Households whose reference person was aged between 55 and 64 registered the highest average annual expenditure on Health (€1,368). In contrast, households whose reference person was aged between 35 and 44 had the lowest average annual expenditure on Health (€1,041).

Chart 1.12. Average annual expenditure on Health by age group of reference person: 2015

In 2015, households with dependent children spent more, on average, on Health than households without dependent children. Households with two dependent children registered the highest expenditure on this category, at €1,354 per year.

Chart 1.13. Average annual expenditure on Health by number of dependent children: 2015

Transport

Transport was the second largest contributor to the total household expenditure in 2015, with 14.2 per cent (an average of €3,181 per year) of households' total expenditure being allocated to it.

The South Eastern, Western and Northern districts spent more, on average, than the other districts on vehicles, vehicle maintenance, and fuel. Compared to expenditure on vehicles, vehicle maintenance and fuel, expenditure on transport services (including, amongst others, public transport, taxi services, and minivan services) was relatively low in all districts. Households in the Southern Harbour district spent the largest proportion of all districts on transport services, at 7.3 per cent.

Chart 1.14. Average annual household expenditure by district on Transport services, fuel, and vehicles and vehicle maintenance: 2015

Households whose reference person was in employment spent more, on average, on Transport than households whose reference person was unemployed, retired, or otherwise inactive. This difference was not evident for expenditure on transport services, which was relatively low for all households.

Chart 1.15. Average annual household expenditure by employment status of reference person on Transport services, fuel, and vehicles and vehicle maintenance: 2015

The average annual expenditure on travel abroad has doubled since 2008. This relates both to passenger transport by air (which includes air fares and expenses related to travel by air) and passenger transport by sea (which includes sea fares from Gozo, sea fares to and from Malta, and local boat trips) from €163 to €328 and from €23 to €49 respectively.

Chart 1.16. Average annual household expenditure on travel abroad: 2008, 2015

Communication

Expenditure related to Communication accounted for 4.3 per cent of the total annual household expenditure in 2015. Similar to 2008, telephone, mobile, and internet services accounted for most (87.7 per cent) of the average annual household expenditure on Communication (€850). This is in contrast with the average annual expenditure on communication-related equipment, which was 10 times less (€85). Postal services accounted for the lowest household expense in this category, with an average of €34 spent yearly per household.

Chart 1.17. Average annual household expenditure on Communication by type of expenditure: 2008, 2015

Households whose reference person was aged over 65 spent the least, on average, on telephone, mobile, and internet services (€593 per year) and equipment (€29 per year) in 2015. Households whose reference person was in the youngest age cohort spent the most, on average, on postal services (€51 per year) in 2015.

Chart 1.18. Average annual household expenditure on Communication by age of reference person and type of expenditure: 2015

Expenditure on leisure

Expenditure on leisure includes expenditure on Restaurants and hotels, and Recreation and culture. In 2015, households spent, on average, just under €3,660 on leisure. This shows an increase when compared to 2008.

Catering services accounted for the bulk (47.8 per cent) of spending which Maltese households allocated to leisure, with an average annual expense of just under €1,750 per household. Catering services also registered the largest increase in expenditure when compared to 2008, with households spending €480 more, on average. Accommodation services contributed to the lowest expenditure on leisure, in both 2008 and 2015. Package holidays registered a slight increase in average expenditure between 2008 and 2015, with households in 2015 paying an annual average of €25 more than in 2008.

Chart 1.19. Average annual expenditure on leisure by type of expenditure: 2008, 2015

A trend can be seen in the average annual expenditure on leisure with regard to the level of education of the reference person. The higher the level of education attained, the higher the expenditure. When looking at the components making up this expenditure category, similar trends can be noted for Restaurants and hotels as well as Recreation and culture. Households whose reference person had a primary level of education or lower spent more on Recreation and culture than on Restaurants and hotels. The opposite is seen for households whose reference person had a secondary level of education or higher.

Chart 1.20. Average annual expenditure on leisure by highest level of education of reference person: 2015

Households whose reference person was employed registered an average increase of €1,200 yearly on leisure. Households whose reference person was retired or otherwise inactive registered only marginal increases in their expenditure on leisure, while households whose reference person was unemployed retained roughly the same average annual expenditure on leisure (€1,640) as in 2008.

Chart 1.21. Average annual household expenditure on leisure by employment status of the reference person: 2008, 2015

Education

The average annual expenditure on Education stood at €624 in 2015. A trend can be seen in the average annual expenditure on this category with regard to the level of education of the reference person. The higher the level of education attained, the higher the expenditure. Households whose reference person had completed a tertiary level of education spent approximately €1,452 per year on Education, while at the other end of the scale, households whose reference person reported to have no schooling spent an average of €56 yearly.

Chart 1.22. Average annual expenditure on Education by highest level of education of reference person: 2015

Miscellaneous goods and services

Households recorded an average annual expenditure on Miscellaneous goods and services of €2,423 in 2015. This indicates an increase of €618 when compared to 2008 levels. This category includes services related to personal care, such as hairdresser and beautician fees; products for personal care; insurance connected with transport and health; jewellery; clocks and watches; as well as other services not elsewhere classified.

Chart 1.23. Annual average expenditure on Miscellaneous goods and services: 2008, 2015

02

FAMILY

The most prevalent types of families in households are those with dependent children, those without dependent children, and elderly households. This chapter explores the distribution of such types of families as well as the similarities and differences between them. Categories of interest such as expenditure on housing, transport, and food are explored in greater depth through subcategories.

2.1 DEPENDENT CHILDREN

The total number of households with dependent children stood at 57,601, nearly 35 per cent of the 164,815 households in the target population. This share has dropped from 42.3 per cent recorded in the HBS 2008 (60,030 households out of a total of 141,840).

Chart 2.1.1. Percentage distribution of households with and without dependent children: 2008

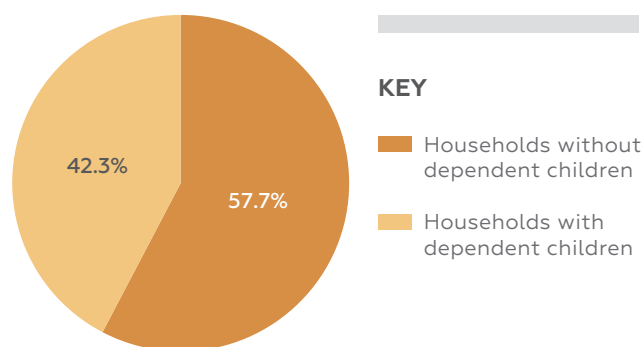

Chart 2.1.2. Percentage distribution of households with and without dependent children: 2015

Expenditure of households with and without dependent children

In 2015, households with dependent children registered an average yearly expenditure of €29,065; an increase of €5,025 when compared to 2008 figures. Increases in household expenditure were noted within all expenditure categories, predominantly in Transport, Education, and Restaurants and hotels by €1,075, €732 and €672 respectively.

The average yearly expenditure for households with two adults and dependent children increased in relation to the number of dependent children in the household. For those households with one dependent child, the average yearly expenditure stood at €28,506, while for households with three or more dependent children the average yearly expenditure was €30,635.

Chart 2.1.3. Average annual expenditure for households with dependent children: 2008, 2015

Households with dependent children tend to spend a larger share of their total expenditure on Education, Transport, and Recreation and culture when compared to households without dependent children, with differences of 3.8, 2.7, and 1.6 percentage points respectively. The converse pattern was observed when comparing expenditure on Food and non-alcoholic beverages and Housing, water, electricity, gas and other fuels. Households with dependent children tend to spend less of their total expenditure on these categories, respectively at 2.9 and 2.4 percentage points less than their counterparts without dependent children.

Table 2.1.1. Average and percentage expenditure distributions by category and household type: 2015

	Households with dependent children: 2015		Households without dependent children: 2015	
	%	Average (€)	%	Average (€)
Food and non-alcoholic beverages	18.2	5,293	21.1	3,946
Alcoholic beverages and tobacco	1.8	523	2.8	527
Clothing and footwear	8.8	2,556	7.2	1,345
Housing, water, electricity, gas and other fuels	7.1	2,058	9.5	1,777
Furnishing, household equipment and maintenance	7.0	2,043	7.7	1,447
Health	4.4	1,292	6.6	1,231
Transport	15.7	4,573	13.0	2,434
Communication	4.2	1,225	4.4	833
Recreation and culture	8.9	2,592	7.3	1,373
Education	4.9	1,416	1.1	198
Restaurants and hotels	8.0	2,324	8.6	1,606
Miscellaneous goods and services	10.9	3,170	10.8	2,022
Total	100.0	29,065	100.0	18,739

Despite an increase in average expenditure across all categories for 2015 when compared to 2008, the distribution of the share of expenditure across the categories has remained relatively similar for households with dependent children. The most notable difference between 2008 and 2015 shares was the decrease of 3.4 percentage points allocated to Food and non-alcoholic beverages.

Table 2.1.2. Average and percentage expenditure distributions by category for households with dependent children: 2008, 2015

	Households with dependent children: 2015		Households with dependent children: 2008	
	%	Average (€)	%	Average (€)
Food and non-alcoholic beverages	18.2	5,293	21.6	5,190
Alcoholic beverages and tobacco	1.8	523	2.1	508
Clothing and footwear	8.8	2,556	8.3	1,993
Housing, water, electricity, gas and other fuels	7.1	2,058	7.6	1,836
Furnishing, household equipment and maintenance	7.0	2,043	9.1	2,197
Health	4.4	1,292	5.2	1,246
Transport	15.7	4,573	14.6	3,498
Communication	4.2	1,225	4.0	964
Recreation and culture	8.9	2,592	8.6	2,068
Education	4.9	1,416	2.8	684
Restaurants and hotels	8.0	2,324	6.9	1,652
Miscellaneous goods and services	10.9	3,170	9.2	2,204
Total	100.0	29,065	100.0	24,040

Chart 2.1.4. Total and average annual expenditure for households with and without dependent children on selected household expenditure items: 2015

Transport

The presence of dependent children within a household significantly increases that household's expenditure on Transport. Households with dependent children spent an average of €4,573 annually on this category, close on twice as much as the amount spent by households without dependent children (€2,434). This increased expenditure extends to all subcategories of Transport. The most significant differences were noted in the expenditure on motor cars, fuels and lubricants.

Chart 2.1.5. Average annual expenditure on transport goods and services for households with and without dependent children: 2015

This pattern was also observed in 2008, although for some subcategories the difference observed in 2008 between households with dependent children and those without was marginally larger. Then, the most notable difference in expenditure was that on motor cars and passenger transport by air, sea and inland waterway.

Chart 2.1.6. Average annual expenditure for households with and without dependent children on transport goods and services: 2008, 2015

Education

The presence of dependent children within a household significantly increases that household's expenditure on Education.

EDUCATIONAL SERVICES

The average annual household expenditure for all levels of education has grown significantly when compared to 2008. Despite the fact that many educational services in Malta are free, results from the 2015 HBS show increases in expenditure for households with dependent children on primary and secondary education. This can be attributed to higher private school fees which have been topped up due to a slight growth in demand for these services. In this regard, when compared to the 2008 HBS, households which registered expenditure on pre-primary and primary education increased by €220, while those which registered expenditure on secondary education increased by €1,570.

In both 2008 and 2015, secondary level education accounted for the largest share of expenditure allocated to education by households with dependent children. This was followed by pre-primary and primary education. However, the largest expenditure increase registered across all education levels between 2008 and 2015 was on tertiary education, where the average expenditure more than tripled; followed by post-secondary non-tertiary education, where the average expenditure doubled.

This increase in expenditure is due to a larger number of persons enrolling in higher education institutions. The number of households with dependent children which registered an expense on post-secondary non-tertiary education and tertiary education increased twofold and fourfold respectively, since 2008.

Chart 2.1.7. Average annual expenditure on education by level for households with dependent children: 2008, 2015

EDUCATION-RELATED EXPENDITURE

An increase was also identified in the average annual expenditure on books by households with dependent children. This is mainly due to a growth of 28.5 percentage points in the number of households with dependent children which purchased books (from 63.1 per cent in 2008, to 91.6 per cent in 2015). Out of all the books purchased by such households in HBS 2015, 62.1 per cent of the books were educational textbooks.

Chart 2.1.8. Average annual expenditure on books by household type: 2015

The average annual expenditure on uniforms for households with dependent children was €52. These households also spent €231 on information processing equipment and €101 on stationery and drawing materials.

Chart 2.1.9. Average annual expenditure of households with dependent children on education-related items: 2015

Households with dependent children by number of dependent children

While the presence of dependent children in the household increased the average annual expenditure of a household, the number of dependent children did not seem to significantly impact the expenditure. The average annual expenditure for households with one dependent child is over €10,000 higher when compared to households with no dependent children. When comparing amongst households with one, two, and three or more dependent children, the annual average expenditure differed by less than €3,000.

Chart 2.1.10. Average annual expenditure of households by number of dependent children in the household: 2015

Households with dependent children by number of adults

Single-parent households registered a relatively higher share of their expenditure on Food and non-alcoholic beverages and Housing, water, electricity, gas and other fuels, when compared to households with two parents and dependent children. On the other hand, households with two parents spent a larger proportion on Transport, and Clothing and footwear. The average annual expenditure of single-parent households was lower for all expenditure categories, except for Housing, water, electricity, gas and other fuels.

Chart 2.1.11. Percentage distribution of household expenditure for single-parent households and households with two adults with one or more dependent children: 2015

Table 2.1.3. Average annual expenditure and percentage distributions of household expenditure for single-parent households and households with two adults with one or more dependent children by expenditure category: 2015

	Single parent household, one or more dependent children		Two adults, one or more dependent children	
	%	Average (€)	%	Average (€)

Total	100.0	20,269	100.0	28,785

2.2 ELDERLY HOUSEHOLDS

A household is considered to be elderly when the reference person is aged 65 and over. The average age of the reference person of households with dependent children stood at 44, while for households without dependent children the average age stood at 62. This result is consistent with the fact that the largest group of Maltese households without dependent children comprises elderly households, as illustrated in the charts below.

Chart 2.2.1. Percentage distribution of households by type and age group of reference person: 2015**Chart 2.2.2. Percentage distribution of households by type and size: 2015**

When considering tenure status by age group of the reference person, the biggest share of rented main dwellings was found amongst households whose reference person was aged 65 and over (26.5 per cent). A downward trend is observed in this share in younger age groups, up to the 35 - 44 age cohort, which has the lowest proportion of households paying rent on their main dwelling, at 15.0 per cent. It is to be noted that households who were renting free of charge were still considered to be renting. Households paying mortgage on their main dwelling, and households whose dwelling was acquired for free were considered to be home owners.

Chart 2.2.3. Percentage distribution of households by tenure status and age group of reference person: 2015

Expenditure

In both 2008 and 2015, households where the reference person was aged 65 and over registered the lowest average expenditure when compared to all other age groups.

Chart 2.2.4. Household average annual expenditure by age group of reference person: 2008, 2015

The second lowest average expenditure was found within households where the reference person was aged between 55 – 64 years. While the distribution of expenditure by age group has remained the same compared to 2008, the gap between elderly households and households with a reference person in the 55 - 64 age group has widened from €6,825 in 2008 to €10,119 in 2015.

Chart 2.2.5. Household average annual expenditure by age group of reference person: 2008, 2015

In 2015, households with reference persons aged 65 and over allocated significantly more of their total expenditure to Food and non-alcoholic beverages than other households. The difference was that of 7.7 percentage points. Moreover, such households allocated a larger share to Health, spending 9.1 per cent of their total expenditure on this category, which is 4.4 percentage points higher than other households.

On the other hand, with a share of 8.9 per cent, elderly households allocated considerably less of their total household expenditure to Transport, a difference of 6.7 percentage points. Other expenditure categories on which elderly households spent less than other households include Clothing and footwear, Recreation and culture, Education, and Restaurants and hotels.

Chart 2.2.6. Percentage distribution of household expenditure by category and age of reference person: 2015

When considering the average annual expenditure on Health for elderly households in 2015, the largest part went to pharmaceutical products, at just over half of such households' health expenditure.

Chart 2.2.7. Average annual expenditure on Health for households with reference person aged 65+: 2015

2.3 COMMODITIES

The HBS questionnaire also included questions on the accessibility to a selected number of commodities by households. Television sets were the most common commodity, with almost all households owning at least one television set, while more than two-thirds owned at least two. Gas water heaters and solar water heaters were not very prevalent, with 91.7 per cent and 87.9 per cent of households, respectively, not owning any of these commodities. Households tended to prefer traditional water heaters, with only 11.6 per cent not owning such heaters. With regard to air-conditioning, 62.9 per cent owned at least one air-conditioning system.

Table 2.3.1. Household distributions by number and type of commodities available to the households: 2015

Table 2.3.2. Household distributions by number of gas and solar water heaters available to the households: 2015

Type of commodity	0		1+		Total	
	Number	%	Number	%	Number	%
Gas water heater	151,115	91.7	13,700	8.3	164,815	100.0
Solar water heater	144,843	87.9	19,972	12.1	164,815	100.0

Expenditure

Generally speaking, in 2015, households with a higher number of a certain commodity spent more, on average, than those with a lower number of that same commodity. The only exception to this pattern is the difference in average annual expenditure between households with no traditional water heaters, and those with one water heater. A possible reason is that households which do not possess such heaters often have other means of heating water, such as gas and solar water heaters.

Table 2.3.3. Average annual expenditure by number and type of commodities available to the households: 2015

Type of commodity	0	1	2	3+
	Average Annual Expenditure (€)			
TV	:	17,828	22,297	28,953

Solar water heater	21,254	30,264

03

HOUSING

This chapter explores the most common types of housing expenditure patterns and trends of the households in Malta and Gozo. The expenditure of different types of households is studied and the expenditure on dwellings is analysed in further detail. Information about the size of the households' property and additional residential buildings owned by the household other than the main dwelling is also provided in this chapter.

Tenure status

Out of the total number of private households, 116,800 (70.9 per cent) were owners of their main dwelling, regardless of whether or not they had pending mortgage payments. On the other hand, 27,147 households (16.5 per cent) were paying rent on their main dwelling. The remaining households (12.7 per cent) were living in a dwelling with an alternative arrangement.

Chart 3.1. Percentage household distribution by tenure status: 2015

During the HBS reference period, a large percentage (over 75 per cent) of households with mortgages on their main dwelling were young households, where the reference person was under 45 years of age. On the other hand, the largest share of homeowners without a mortgage had a reference person aged 45 and over (85.1 per cent). The age distribution of households which were renting their main dwelling tended to be more skewed to the older age groups, as shown in the following chart.

Chart 3.2. Percentage distributions of households by tenure status and age group of reference person: 2015

EXPENDITURE

The tenure status of households provides an insight into the analysis of expenditure patterns. The average annual expenditure of households which owned their main dwelling amounted to €23,665, whereas households renting their main dwelling spent on average €6,000 less per year.

Overall, households in possession of their main dwelling spent more in almost every expenditure category when compared to tenants. Apart from the Transport expenditure category, this difference is particularly evident in the Miscellaneous goods and services; Recreation and culture; and Food and non-alcoholic beverages expenditure categories; exceeding around €1,000 in each case. The only exceptions are the following two categories: Housing, water, electricity, gas and other fuels and Alcohol and tobacco, where tenants spent relatively more than homeowners.

Chart 3.3. Annual average household expenditure by tenure status and type of expenditure category: 2015

The second largest expense incurred by households paying rent on their main dwelling was on Housing, water, electricity, gas and other fuels (18.6 per cent), almost double the amount that homeowners spent on this category (6.7 per cent). Transport represents the second highest category in terms of total annual expenditure for households which owned their main dwelling (15.0 per cent), and the third for rent-paying households (10.2 per cent).

Chart 3.4. Expenditure distributions by tenure status and expenditure category: 2015

Amongst households with ownership of their main dwelling, those without a mortgage tended to allocate a higher share of their spending to Food and non-alcoholic beverages and Health when compared to households with mortgage payments (by 5.4 and 2.1 percentage points, respectively). For all other expenditure categories, homeowners with a mortgage spent relatively higher shares of total expenditure than the remaining households. In particular, the difference is evident for the Transport and Restaurants and hotels expenditure categories (by 2.6 and 1.5 percentage points, respectively).

These expenditure patterns coincide with the age of the households' reference person, where the expenditure pattern of households without a mortgage is similar to that of households whose reference person is aged 55 and over. In the same manner, the expenditure pattern of households with a mortgage is similar to that of households with a younger reference person. This relationship is highlighted in the previous section.

Chart 3.5. Expenditure distribution of households that own their main dwelling: 2015

Noticeable differences between expenditure patterns were also observed depending on whether households were paying mortgage or rent on their main dwelling.

In 2015, households who were paying rent on their main dwelling allocated more of their expenditure to Food and non-alcoholic beverages and Housing, water, electricity, gas and other fuels than those with mortgage payments; the gap being 6.3 and 12.5 percentage points, respectively. On the other hand, households with a mortgage on their main dwelling tended to allocate a larger proportion of their expenditure to Transport and Education compared to households paying rent, by 6.6 and 2.2 percentage points, respectively.

Chart 3.6. Expenditure distributions of households paying rent or mortgage on their main dwelling: 2015

Despite the above, the average annual expenditure of households with a mortgage¹ was higher than that of households paying rent on their main dwelling. This difference is just over €10,500. In fact, in 2015, homeowners with a mortgage spent relatively more, on average, on almost all expenditure categories, with the notable exception of Housing, water, electricity, gas and other fuels. With regard to this category, households paying rent on their main dwelling spent almost double, on average, of what households on mortgage spent in 2015.

1 Only interest paid on mortgage is included in the computation of final expenditure, instead of the entire loan payment.

Chart 3.7. Average annual expenditure of households paying rent or mortgage on their main dwelling by expenditure category: 2015

Household and dwelling sizes

DISTRIBUTIONS

When comparing household and dwelling sizes, it can be observed that the average number of rooms in a dwelling increased with the size of the household. The highest growth in the average number of rooms was observed between households of one and two members.

Chart 3.8. Average number of rooms by household size: 2015

A larger household size translates into an increase in the number of rooms for both households that own their main dwelling and households that pay rent. For the latter, however, such growth is less pronounced. Moreover, when comparing the number of rooms for households paying rent and having four members with the ones with five or more members, the average number of rooms went down to a value that is only slightly higher than the value in respect of households with two persons.

Chart 3.9. Average number of rooms by household size and tenure status: 2015

EXPENDITURE

The average annual household expenditure tended to increase as the number of rooms of the main dwelling increased, as shown in the bar graph below. Average values of annual expenditure ranged from €15,342 for households whose main dwelling had less than four rooms, to €27,009 for households whose main dwelling

had seven or more rooms. This trend is similar to that obtained when comparing total household expenditure with household size.

Chart 3.10. Average annual household expenditure by number of rooms in the main dwelling: 2015

As expected, the average annual expenditure on housing costs (which includes expenditure on Housing, water, electricity, gas and other fuels and Furnishing, household equipment and maintenance) tends to grow with increasing dwelling size. It can be observed that both the smallest (less than four rooms) and largest dwellings (seven or more rooms) have undergone the largest expenditure, corresponding to €4,043 and €4,114 per year.

Chart 3.11. Average annual household expenditure on housing by number of rooms in the main dwelling: 2015

A different pattern was observed when considering the housing costs according to the household size: as the household size increases, so do the annual average housing costs. Single-person households spent an average of €2,495 annually, while households with five or more persons spent an average of €4,414 every year. Housing costs by household size followed similar trends both in 2008 and 2015, with average annual expenditure being higher in 2015 except in respect of four-member households, which showed a drop over 2008.

Chart 3.12. Average annual household expenditure on housing by household size: 2008, 2015

Type of main dwelling

DISTRIBUTIONS

When considering the main dwelling type, the largest share of households (38.3 per cent) resided in terraced houses, followed by tenements/maisonettes (28.8 per cent), and flats/penthouses (27.7 per cent). The rest resided in semi/fully-detached houses or other dwelling types.

Chart 3.13. Household distribution by dwelling type: 2015

EXPENDITURE

Households living in semi/fully-detached houses registered the highest average annual expenditure, amounting to €33,936 in 2015. Households living in flats/penthouses or tenements/maisonettes spent slightly less than the national average, which stood at €22,346 in 2015. On the other hand, households in terraced houses spent just above the national average line.

Chart 3.14. Average annual household expenditure by dwelling type: 2015

Ownership of a secondary dwelling

DISTRIBUTIONS

Ownership of a secondary dwelling appears to be unaffected by whether or not households had dependent children. Out of all the households without dependent children, 14.6 per cent owned a secondary dwelling. On the other hand, 13.9 per cent of households with dependent children owned a secondary dwelling, a difference of just 0.7 percentage points.

Chart 3.15. Distribution of households by ownership of a secondary dwelling and household type: 2015

Similarly, household size also had a minor impact on whether or not households owned a secondary dwelling. Households with only one member accounted for the lowest percentage of secondary-dwelling owners, at 9.4 per cent.

Chart 3.16. Percentage distribution of households by ownership of a secondary dwelling and household size: 2015

EXPENDITURE

The overall expenditure patterns of households do not seem to be overly affected by whether or not they owned a secondary dwelling. The only exceptions were Transport, and Furnishing, household equipment and maintenance, on which households without a secondary dwelling spent more (by 1.7 and 1.9 per cent, respectively).

Chart 3.17. Distribution of household expenditure by ownership of a secondary dwelling and expenditure category: 2015

Households that owned a secondary dwelling spent more, on average, on all expenditure categories than households that did not own a secondary dwelling, a difference of €6,346. The biggest difference between the two – €1,353 – was recorded in Transport.

Chart 3.18. Average annual household expenditure by ownership of a secondary dwelling and expenditure category: 2015

Number of garages

DISTRIBUTIONS

A higher share of households in possession of their main dwelling either owned or paid rent on a garage, when compared to other household types. In particular, more than half of such households had at least one garage in 2015. On the other hand, almost three-quarters of the households paying rent on their main dwelling did not own a garage. In both cases, the lowest share of households was for those owning two or more garages.

Chart 3.19. Percentage distribution of households that own their main dwelling by the number of garages owned: 2015

Chart 3.20. Percentage distribution of tenants by the number of garages owned: 2015

KEY

- 0
- 1
- 2+

EXPENDITURE

During 2015, households that did not own a garage spent much less, on average, than households who owned at least one garage. This is also linked to the fact that homeowners tended to spend more than tenants, as already shown above. When comparing the average annual expenditure of households that did not own a garage with those who owned one garage, a difference of €7,032 was observed. The difference in average annual expenditure between households with one garage and those with two or more garages stood at €4,400.

Chart 3.21. Average annual household expenditure by number of garages owned by the household: 2015

KEY

- Average annual expenditure

Households that did not own a garage allocated more of their expenditure to Food and non-alcoholic beverages than those who owned at least one garage, with a difference of 2.9 percentage points. A larger gap is observed when comparing the expenditure allocated to Housing, water, electricity, gas and other fuels: households that did not own a garage spent 3.8 percentage points more on this category than households who owned a garage. This is explainable by a larger percentage of non-garage owning households paying rent on their main dwelling. Conversely, households in possession of at least one garage allocated more to Transport (by 3.5 percentage points) and Recreation and culture (by 1.8 percentage points).

Chart 3.22. Distribution of household expenditure by ownership of garages: 2015

04

I N C O M E

The characteristics of income are explored in this chapter along with the various sources of income. The factors contributing to income such as level of education and main source of income are explored. Comparisons by demographic categories such as sex, age, and marital status are also made. This chapter will also explore the relation between income and the number of commodities. In the end there will also be an analysis of the net savings by several demographic and social variables.

Introduction

Household income is an important socio-economic variable which can be used to assess the economic status of households. Income is undoubtedly related to expenditure, and considerably affects the consumption behaviour of households. Eventually, evaluating differences in expenditure patterns for different socio-economic groups will be essential for assessing the economic wellbeing of households.

Despite level shifts, the income distributions of households did not change extensively since 2008, as shown in the following chart. The HBS 2015 results revealed that more than three-quarters of the total income earned by households was sourced from employment, while just over a fifth was derived from social benefits (including retirement pensions).

Chart 4.1. Distributions of household disposable income by type: 2008, 2015

Demographics

In general, households where the reference person was male tended to earn more. In absolute terms, the gap between the averages for male and female reference persons has narrowed from €8,500 in 2008 to €6,558 in 2015, albeit remaining almost stable in percentage terms.

Chart 4.2. Average annual household disposable income by sex of reference person: 2008, 2015

The age group of the reference person also had an impact on the average annual disposable income of households. When comparing 2008 and 2015, it can be noted that the average annual disposable income increased across all age groups of reference persons. The largest increase (of €8,791) was registered among households whose reference person was aged between 55 and 64.

Chart 4.3. Average annual household disposable income by age group of reference person: 2008, 2015

The only group of households which earned less than the national average comprised those with a reference person aged 65 and over (by €8,956). On the other hand, households whose reference person was aged between 45 and 54 had the highest average annual disposable income, at €32,936.

Chart 4.4. Average annual household disposable income by age group of reference person: 2015

In 2015, households whose reference person was married earned, on average, a disposable income of €32,438, higher than the national average by €5,828. All remaining households earned relatively less than the national average.

Chart 4.5. Average annual household disposable income by marital status of reference person: 2015

Households with married reference persons tended to earn relatively more than other households. This characteristic was demonstrated in both the HBS of 2008 and 2015. This result also emerges from the fact that households with married reference persons tend to be larger in size (average of 3.2 compared to 1.6) and number of workers (average of 1.5 compared to 0.6). The lowest average annual disposable income in 2008 was earned by households whose reference person was widowed, at €12,428; while in 2015, households whose reference person was single earned the lowest average annual disposable income, at €16,713.

Chart 4.6. Average annual household disposable income by marital status: 2008, 2015

Income by education level, labour status and household type

The level of education of the reference persons had a significant impact on the households' disposable income. In both 2008 and 2015, households whose reference person had no schooling or a pre-primary level of education earned the least, an average of €13,331 in 2008 and an average of €13,608 in 2015. At the other end of the scale, households whose reference person had a tertiary level of education earned the most: €31,883 in 2008, which increased to €39,675 in 2015.

Chart 4.7. Average annual household disposable income by highest level of education of reference person: 2015**Chart 4.8. Average annual household disposable income by highest level of education of reference person: 2008, 2015**

In 2015, households with employed reference persons had an average annual disposable income of €34,281, which is €7,671 more than the national average of €26,610. Conversely, households whose reference person had any other labour status earned, on average, a lower disposable income than the national average. Households with unemployed reference persons earned substantially less than those with retired or otherwise inactive reference persons.

Chart 4.9. Average annual household disposable income by labour status of reference person: 2015

The disposable income of households whose reference person was in employment increased significantly since 2008, from €25,813 to €34,281 – an increase of 32.8 per cent. The increase in disposable income for households with unemployed reference persons was comparatively low, by just over €2,000 (17.6 per cent) when compared to 2008 levels. During the same period, households whose reference person was retired registered an increase of €4,503 (30.6 per cent).

Chart 4.10. Average annual household disposable income by labour status of reference person: 2008, 2015

In 2015, households with dependent children earned an average annual disposable income of €33,097, while those without dependent children recorded an average disposable income of €23,124. Households with dependent children earned €6,487 more than the national average, while those without dependent children earned €3,486 less than the national average.

Chart 4.11. Average annual household disposable income by household type: 2015

In absolute terms, the gap between the two household types widened since 2008, from €4,070 to €9,973 in 2015. In percentage terms, this gap has doubled from 20.3 per cent to 43.1 per cent.

Chart 4.12. Average annual household disposable income by household type: 2008, 2015

Comparisons of household disposable income with household expenditure

Comparisons between household disposable income and household expenditure can be better assessed through equivalisation, since this process mitigates the impact of external factors: mainly household size and composition.¹

A strong relationship emerges between the equivalised disposable income and the equivalised expenditure of households, as demonstrated in the chart below. In fact, the average spending of households in the 25% highest equivalised income bracket is close on twice as much as that recorded for households in the lowest 25% equivalised income bracket.

Chart 4.13. Equivalised average annual household expenditure by household equivalised disposable income quartile: 2015

Differences in expenditure patterns can also be observed when comparing high-income and low-income earners. In percentage terms, households in the higher income brackets tended to allocate less to Food and non-alcoholic beverages and Health than those in lower brackets. The expenditure distribution of the former household brackets tended to be more skewed towards Transport, Education, and Restaurants and hotels than the latter.

¹ Refer to methodological notes for more details.

Chart 4.14. Expenditure distributions by household equivalised disposable income quartiles: 2015

Household savings

By comparing average annual expenditure and income of households derived from the HBS, it is possible to obtain proxy measures of the annual savings of Maltese households. It is important to highlight that these measures are subject to quality limitations which are mainly linked to the following three assumptions:

- The computation of disposable income does not take into account non-regular income (e.g. inheritance) earned during 2015. Moreover, some regular income components (e.g. social benefits in kind) are not included in the computation of disposable income.²
- The value of purchased goods is entirely included in the computation of expenditure, regardless of whether or not these payments occurred over more than one transaction.
- Some of the expenditure components (e.g. capital transfers, fines, etc.) are not included in the computation of total household expenditure.²

Average estimates of household savings for 2015 amounted to €4,263. This is a significant increase (by 3.5 per cent) when compared to the savings generated by households in 2008, at €1,208 on average. Nevertheless, one should take into consideration that the average disposable income and the average expenditure have increased by 28.3 and 14.1 per cent respectively in 2015.

Chart 4.15. National average disposable income and expenditure: 2008, 2015

2 Refer to methodological notes for more details.

Annual household savings vary by age of the reference person. Interestingly, households whose reference person was aged between 55 and 64 generated the most savings (€6,686), even though such households did not have the highest income. Households with reference persons aged 18 to 34 generated the least savings (€1,830).

Chart 4.16. Average annual household disposable income and expenditure by age group of reference person: 2015

From the perspective of the highest level of education attained, households whose reference person had a tertiary level of education generated the most savings, on average, out of all the household types, at €9,620. This is clearly related to the fact that these types of households had the highest income. At €1,275, households whose reference person had no schooling or a pre-primary level of education registered the least savings.

Chart 4.17. Average annual household disposable income and expenditure by highest level of education of reference person: 2015

In spite of differences in disposable income, in 2015 households with dependent children and those without dependent children generated, on average, similar savings. The former generated savings of €4,033 and the latter of €4,387. The level of savings among households with dependent children has grown significantly since 2008.

Chart 4.18. Average annual household disposable income and expenditure by household type: 2008, 2015

05

REGIONAL CHARACTERISTICS

This chapter explores differences amongst the main regions of the country. It contains comparative data about various aspects discussed in previous chapters such as income and spending habits, this time on a regional level. Thus, this chapter helps to assign a geographical spread to the previously presented data and reveals any trends which are heavily dependent on district.

Distributions

Compared to 2008, the number of households across all districts has grown by 22,975, a 16.2 per cent increase. The number of households residing in the Northern Harbour district registered the largest increase in absolute terms in 2015, of just under 7,400 households. However, the number of households in the Northern district recorded the highest increase in percentage terms, of 28.2 per cent in 2015 when compared with 2008.

Table 5.1. Distribution of households by district: 2008, 2015

	Southern Harbour	Northern Harbour	South Eastern	Western	Northern	Gozo and Comino	All households
2008	28,210	43,640	20,210	18,300	20,620	10,860	141,840
2015	30,216	51,035	24,207	20,732	26,430	12,195	164,815

Chart 5.1. Distribution of households by district: 2008, 2015

When analysing the distribution of tenure status by district, an overall net predominance of households in possession of their main dwelling was observed across all districts. The one with the highest share of homeowners is the Western district (83.2 per cent), whereas the districts with the highest percentages of households paying rent were the Southern Harbour (30.7 per cent) and the Northern Harbour districts (20.1 per cent).

Chart 5.2. Distribution of households by district and tenure status: 2015

When analysing household distributions by both the age group and district of the reference person, it was observed that households whose reference person was aged 65 and over made up the largest share of households in all districts, with the exception of the Western district. Gozo and Comino had the largest percentage (41.8 per cent) of households with a reference person aged 65 and over.

The district with the highest percentage of households with young reference persons (18-34 years) was the South Eastern district, at 14.7 per cent. At the other end of the spectrum, the Northern Harbour district had the lowest percentage of households whose reference person belonged to this age cohort, at 8.2 per cent.

Chart 5.3. Distribution of households by district and age group of reference person: 2015

Gozo and Comino had 64.6 per cent of households living in a terraced house – this is the highest rate reported among all districts. On the other hand, the Southern Harbour and Western districts recorded the highest percentages of households residing in tenements or maisonettes, with shares of 34.1 per cent and 34.0 per cent respectively. Moreover, the Northern Harbour district had the highest percentage of households residing in flats or penthouses, at 35.7 per cent.

Chart 5.4. Distribution of households by district and dwelling type: 2015

Expenditure

The average annual expenditure increased across all districts in comparison with 2008 levels. The largest increase was recorded in the Western district, where households spent an average of €4,336 more in 2015 than in 2008. The smallest growth in average household expenditure was seen in the Southern Harbour district, with an increase of €1,126 when compared to 2008 estimates.

Chart 5.5. Average annual expenditure by district: 2008, 2015

Households residing in the Northern and Western districts tended to have the highest expenditure when compared to other households, with annual averages exceeding the national average by €2,180 and €3,419, respectively. Households in the Northern Harbour and South Eastern districts spent about the same as the national average. The Southern Harbour and Gozo and Comino districts had the lowest average expenditure when compared to other households, respectively €3,462 and €2,995 below the national average.

Chart 5.6. Average annual expenditure by district: 2015

In 2015, households residing in the Southern Harbour district allocated a relatively larger share of their expenditure to Food and non-alcoholic beverages than the national average, by 2.8 percentage points. Households residing in this district also allocated less of their expenditure to Transport (by 1.1 percentage points) and Recreation and culture (by 1.0 percentage point).

Chart 5.7. Expenditure distribution in the Southern Harbour district: 2015

Households residing in the Northern Harbour district showed a different expenditure pattern than the Southern Harbour district, allocating less expenditure to Food and non-alcoholic beverages than the national average (by 0.7 percentage points). These households also allocated more of their annual expenditure to Restaurants and hotels than the national average (by 0.8 percentage points) and less to Transport (by 1.3 percentage points).

Chart 5.8. Expenditure distribution in the Northern Harbour district: 2015

Households residing in the South Eastern district allocated less expenditure than the national percentage to Food and non-alcoholic beverages (by 0.9 percentage points); Housing, water, electricity, gas and other fuels (by 0.8 percentage points); and Restaurants and hotels (by 1.1 percentage points). Conversely, these households spent more on Clothing and footwear (by 0.8 percentage points) and Transport (by 2.2 percentage points).

Chart 5.9. Expenditure distribution in the South Eastern district: 2015

In 2015, households residing in the Western district exceeded the national average in expenditure on Miscellaneous goods and services (by 1.9 percentage points); Furnishing, household equipment and maintenance (by 1.2 percentage points); and Transport (by 0.9 percentage points). Lower expenditure than the national average was allocated to Food and non-alcoholic beverages (by 1.5 percentage points) and Health (by 0.7 percentage points) by these households.

Chart 5.10. Expenditure distribution in the Western district: 2015

In the Northern district, households allocated more of their expenditure to Transport (by 2.2 percentage points) and Education (by 0.5 percentage points) than the national percentage. The same households allocated less expenditure to Food and non-alcoholic beverages (by 1.2 percentage points).

Chart 5.11. Expenditure distribution in the Northern district: 2015

In 2015, households residing in the Gozo and Comino district assigned significantly more (4.7 percentage points) of their expenditure to Food and non-alcoholic beverages than the national percentage. These households also allocated a larger proportion to Clothing and footwear (by 1.5 percentage points) than the national percentage. On the other hand, households residing in Gozo and Comino allocated less of their expenditure to Transport (by 3.8 percentage points); Housing, water, electricity, gas and other fuels (by 1.7 percentage points); and Miscellaneous goods and services (by 1.4 percentage points).

Chart 5.12. Expenditure distribution in Gozo and Comino: 2015

Income

Similar patterns of household income levels by district can be observed when compared to household expenditure. Average household disposable income registered by the Western and Northern districts stood at €30,930 and €29,830 respectively, more than €3,000 above the national average in both cases. Much lower averages were obtained within the Gozo and Comino and Southern Harbour districts, which stood at €22,402 and €22,964 respectively.

Chart 5.13. Average annual household disposable income by district: 2015

The average household disposable income emerged as higher than the average spending in all districts, with differences ranging from €3,051 in Gozo and Comino to €5,165 in the Western district.

Chart 5.14. Average annual household disposable income and average expenditure by district: 2015

Households residing in the Northern and Western districts tended to have the highest employment income¹ when compared to other households, with annual averages of €39,458 and €39,280, respectively. The highest average income from social benefits and allowances pertained to households in the Northern Harbour district. With regard to the Southern Harbour and South Eastern districts, these had the lowest income from other sources when compared to other households, with annual averages of €1,960 and €2,028 respectively.

Chart 5.15. Average annual household income by income type and district: 2015

¹ Note that only households earning income from a particular category were included in the calculation for that category.

A P P E N D I C E S

A P P E N D I X

Methodology

The Household Budgetary Survey (HBS) is held approximately every five years, and aims to capture the expenditure patterns of residential private households in Malta and Gozo. Detailed information is also collected on other variables, such as possession of durable goods, cars, basic information on housing, and several other demographic and socio-economic characteristics. The survey extends to all private households in the country, which amounted to around 164,800 in 2015.

CONCEPTS AND DEFINITIONS

The following is a list of concepts and definitions of the main socio-economic variables utilised in the HBS:

HOUSEHOLD

A household comprises one person living alone or a group of people living at the same address and sharing certain expenses and daily needs. The members of a household are not necessarily related by blood or marriage.

As the survey covers only private households, people living in institutional dwellings (e.g. hotels, hospitals, convents, prisons, homes for the elderly, etc.) are excluded. An individual belongs to a household even if he/she was on holiday or on a business trip during the survey period but simultaneously kept household relationships and continued to contribute to household expenses.

REFERENCE PERSON

The reference person is very often identified as the head of the household (or 'bread winner'), that is the member contributing mostly to the total income of the household.

DEPENDENT CHILD

A person is defined as a dependent child if s/he is:

- Under 18; or
- Aged between 18 and 24 years and is economically inactive.

Otherwise, the person is referred to as an adult.

DISTRICTS

The Local Administrative Unit (LAU) classification was used for aggregation purposes. All localities (LAU 2) have been grouped into six districts (LAU 1) as follows:

1. ***Southern Harbour***
Valletta, Vittoriosa, Senglea, Cospicua, Ғaḏ-Ḑabbar, Fgura, Floriana, Kalkara, Ғal Luḡa, Marsa, Paola, Santa Luċija, Ғal Tarxien, Xgħajra.
2. ***Northern Harbour***
Ғal Qormi, Birkirkara, Gżira, Ғamrun, Msida, Pembroke, Tal-Pietà, St Julian's, San Ġwann, Santa Venera, Tas-Sliema, Swieqi, Ta' Xbiex.

3. **South Eastern**
 Żejtun, Birżebbuġa, Gudja, Ғal Ғhaxaq, Ғal Kirkop, Marsaskala, Marsaxlokk, Mqabba, Qrendi, Ғal Safi, Żurrieq.
4. **Western**
 Mdina, Ғaž-Żebbuġ, Siġġiewi, Ғ'Attard, Ғal Balzan, Ғad-Dingli, Iklin, Ғal Lija, Rabat, Mtarfa.
5. **Northern**
 Ғal Ғhargħur, Mellieħa, Mġarr, Mosta, Naxxar, St Paul's Bay.
6. **Gozo and Comino**
 Victoria, Fontana, Ғħajnsielem, Ғħarb, Ғħasri, Ta' Kerċem, Munxar, Nadur, Qala, San Lawrenz, Ta' Sannat, Xagħra, Xewkija, Żebbuġ.

CONSUMPTION EXPENDITURE

The consumption expenditure tables covered in this publication illustrate the main commodity and service groups of expenditure at different hierarchical levels based on the Classification of Individual Consumption by Purpose (COICOP)¹. This harmonised coding system is used internationally for the computation of Harmonised Index of Consumer Prices (HICP), and allows for comparisons of expenditure patterns between different countries:

COICOP 01:	Food and non-alcoholic beverages;
COICOP 02:	Alcoholic beverages and tobacco;
COICOP 03:	Clothing and footwear;
COICOP 04:	Housing, water, electricity, gas and other fuels;
COICOP 05:	Furnishing, household equipment and routine maintenance of the house;
COICOP 06:	Health;
COICOP 07:	Transport;
COICOP 08:	Communication;
COICOP 09:	Recreation and culture;
COICOP 10:	Education;
COICOP 11:	Restaurants and hotels;
COICOP 12:	Miscellaneous goods and services.

Figures for consumption expenditure presented in this publication were compiled using a methodology which is in line with Eurostat's recommendations for best practice. This ensures harmonisation and therefore comparability of results at European level. The following expenditure categories were excluded from the computation of household expenditure:

¹ More information on COICOP can be found at:
<https://nso.gov.mt/metadata/classificationdetails.aspx?id=COICOP%201999>

- a. Business expenses;
- b. Additions to savings, amounts invested (including purchasing of property, which for the purposes of HBS was considered an investment) or loaned;
- c. Gambling losses;
- d. Goods or services produced as outputs of incorporated enterprises owned by households and are retained for consumption by members of the household;
- e. Retail value of home-grown produce (i.e. from own garden or farm) consumed by the household;
- f. Subsistence expenditure incurred while abroad;
- g. Repayments of loans (e.g. mortgage capital repayments);
- h. Fines;
- i. Trade union, club and other memberships;
- j. Licences
- k. Donations to non-profit institutions;
- l. Life insurance services.

Certain types of expenditure (namely, from (f) to (l) above), which usually occur on a more regular basis though not at frequent intervals, such as insurance payments, licences, fines, etc. are included in Appendix C for completeness.

The following list outlines how certain instances of situational expenditure were handled in connection with the collection of household consumption expenditure:

1. ***Income tax and social insurance contributions***
Income tax payments and social insurance contributions were not recorded as expenditure but treated as negative income components for the computation of disposable income.
2. ***Regular household cash transfers paid***
This component, which includes regular cash transfers paid by household members, were also treated just like charges on household disposable income, and therefore did not form part of household consumption expenditure.
3. ***Transfers within the same household***
Transfers within the same household such as pocket money given to children, were neither considered as household expenditure nor as household income, the reason being that they are simply transfer of money from one household member to another.

4. **Supply of articles from family shop**

The retail values of articles obtained without payment from a family shop were recorded in the expenditure diaries as they were acquired.

5. **Expenditure abroad**

Total expenditure on holidays was based on replies to a special retrospective question included in the main questionnaire relating to holidays during the three months preceding the interview. In the case of foreign or local holidays occurring during the two weeks of the interview, all related expenditure was recorded in the diaries.

6. **Credit accounts and hire purchase arrangements**

Any goods ordered or delivered but not paid for were ignored unless they were acquired through credit accounts or hire purchase arrangements. Any goods purchased through hire purchase or bank loan agreements were recorded at the total fee incurred by the agreement, rather than the actual price of the goods.

INCOME

In addition, the HBS collects information on household income that is compiled according to a harmonised methodology in line with the European Statistics on Income and Living Conditions (EU-SILC) survey². Administrative data sources were used in conjunction with information collected directly from the households for the collection and compilation of this data. Coherence tests with EU-SILC were also performed to ensure the validity of HBS income data.

This concept integrates all current receipts obtained by the household or individual household members, which are meant to sustain current consumption by the household. Household gross income includes:

1. **Employment income:**

- Employee cash or near cash income
- Non-cash employee income (only company car and associated costs included)
- Cash benefits or losses from self-employment

2. **Benefits and allowances:**

- Unemployment benefits
- Old-age benefits
- Survivors' benefits
- Sickness benefits
- Disability benefits
- Education-related allowances
- Family/Children related allowances
- Social exclusion not elsewhere classified
- Housing allowances

² Regulation (EC) No 1177/2003 of the European Parliament and of the Council of 16 June 2003 concerning community statistics on income and living conditions.

3. ***Interests, dividends, profits from capital investments in unincorporated business;***

4. ***Other income***

- Income from rental of property or land
- Regular inter-household cash transfers received
- Income received from individual private pension plans

The ***household disposable income*** is calculated by deducting:

- Regular inter-household cash transfers paid;
- Tax on income; and
- Social insurance contributions.

The computation of the household income component in HBS 2015 refers to calendar year 2015.

EQUIVALENCE SCALES

Equivalence scales were used to calculate the *equivalised household size* in order to enhance comparability between households having different compositions. The 'modified OECD' equivalence scale was used in this report. This entails:

- A weight of 1 to the first adult (reference person)
- A weight of 0.5 to any other household member aged 14 and over and;
- A weight of 0.3 to each other child under 14 years of age.

The resulting figures are then attributed to each household member accordingly and weights for each household member are then summed to calculate the equivalised household size.

As an example, a household containing two adults and two children aged 18 and 12 will have a weight of one assigned to the first adult (the reference person), a weight of 0.5 assigned to the second adult, a weight of 0.5 assigned to the 18 year old child, and a weight of 0.3 assigned to the child aged 12. The total equivalised household size for this example would be **2.3 (1 + 0.5 + 0.5 + 0.3)**.

By dividing the total household expenditure by the equivalised household size, the equivalised household expenditure is obtained. Similarly, by dividing the household disposable income by the equivalised household size, one obtains the equivalised household income. These two variables are then assigned to all household members, to obtain comparable measures of income and expenditure, irrespective of the ages of the household members.

SURVEY COVERAGE

The HBS extends to all private households in the country, which amounted to approximately 164,815 in 2015, housing approximately 424,000 individuals. All other residential establishments (e.g. hotels, hospitals,

convents, prisons, homes for the elderly, etc.) in which people reside collectively, were excluded from the selection of the sample.

SAMPLE DESIGN AND SELECTION

The gross sample contacted for the HBS consisted of 6,325 households which were selected by means of Systematic Random Sampling. This sampling strategy is particularly useful when selecting large samples from a long list of households as it ensures an even spread while preserving the key population characteristics.

The sample was drawn from a register of dwellings maintained by the NSO, which is based on the 2011 Census of Population and Housing with regular annual updates being performed to ensure a comprehensive coverage of the sampling frame. Although the HBS is, in principle, a household-based survey, particular attention was given to ensure that specific household and individual characteristics: such as household type, age, sex, marital status and employment status were preserved in order to guarantee the representativeness of the sample at an individual level.

DATA COLLECTION

Fieldwork was undertaken by a team of about 40 Interviewers and 25 Supervisors. Data was captured partly through face-to-face interviewing (main questionnaire) and partly by self-completion (diaries). The role of the interviewers was to carry out face-to-face interviewing and assist the households when filling the diaries. All survey interviewers and supervisors were trained and familiarised with the survey to ensure an efficient and impartial data collection process. The training of field staff commenced in February 2015, with the fieldwork starting during the following month.

The HBS was carried out under the Malta Statistics Authority Act 2000 which provides for non-disclosure of individual information and obliges the NSO to ensure that data is collected in a full and impartial manner.

In view of the particular characteristics of the survey, data collection was carried out over a whole calendar year, between April 2015 and April 2016. In order to ensure a comprehensive coverage of the households throughout the year, the sample was randomly divided into 13 batches (or sub-samples), each consisting of about 480 households. These batches were systematically allocated in a specific order to ensure that the whole sample is evenly distributed throughout the survey period. Data collection was carried out with each household over a period of two weeks. Households were distributed evenly over 52 weeks, so that every week a group of households was introduced to the survey for two consecutive weeks, while another equally-sized group was removed from the sample.

Figure A1. HBS household participation process

	WEEK 1	WEEK 2	WEEK 3	WEEK 4	
HOUSEHOLD GROUP 1	wk 1 ~ 142 hholds	wk 2 ~ 142 hholds			
HOUSEHOLD GROUP 2		wk 1 ~ 142 hholds	wk 2 ~ 142 hholds		
HOUSEHOLD GROUP 3			wk 1 ~ 142 hholds	wk 2 ~ 142 hholds	
HOUSEHOLD GROUP 4				wk 1 ~ 142 hholds	wk 2 ~ 142 hholds
TOTAL PARTICIPATING HOUSEHOLDS	~ 142 hholds	~ 284 hholds	~ 284 hholds	~ 284 hholds	

The survey focused on the randomly selected sample of households with specific addresses. The main survey tools were an in-depth screening process, the main questionnaire and the weekly diaries, as described below:

SCREENING

During the screening period, all households belonging to a specific batch were contacted in advance in order to introduce that group to the survey. Apart from familiarising the selected households with the survey, the screening process also served to establish which households would be participating in the HBS. Additionally, screening allowed for pre-determining the allocation of households in each batch along the year to ensure a uniform spread of the sample, as explained above.

Figure A2. HBS screening and data collection process

	WEEK 1	WEEK 2	WEEK 3	WEEK 4
MARCH 2015		Screening for April '15		
APRIL 2015		Screening for May '15		
	Data collection of accepting households in screening of March '15			
MAY 2015		Screening for June '15		
	Data collection of accepting households in screening of April '15			

The screening phase also provided a means by which the NSO could obtain key information on the households, including non-participating ones. Part of this information was required to gain further details on these households and to partly offset the imbalances in the distribution of the net sample. This information was collected by means of a screening form which had to be filled by the Interviewers in their initial contact with the households.

MAIN QUESTIONNAIRE

The main questionnaire was filled by the Interviewers during the two-week survey period. It included a wide range of socio-economic questions including:

- A complete demographic profile of the households and each household member;
- Basic information on the dwelling (in terms of its state of repair and contents);
- Self-employment income information at an individual level;
- Irregular expenses (normally occurring on a quarterly or annual basis in 2015).

The main questionnaire can be viewed in Appendix E.

DIARIES

The primary scope of the diaries was to collect regular expenditure and main product information, such as physical quantities and places of purchase. Participating households were instructed to list all their daily purchases in the diaries during the two-week period starting on the first Monday of the reference period.

Households were asked to fill in the diaries on a daily basis, with interviewer visits serving to assist the households in any difficulties, as well as to provide a preliminary check of the data being collected. Two diaries were distributed to each participating household: each diary covering a reference week from Monday to Sunday.

SURVEY RESPONSE

Out of the gross sample for the survey, 376 households were found to be ineligible. These mainly consisted of non-residential addresses, permanently vacant dwellings or residences that no longer exist.

A total of 3,691 households accepted to participate in the survey, yielding an effective response rate of 62.0 per cent of the total number of eligible households (i.e. the gross sample less the ineligible households). Details on the response achieved for the survey are presented in the table below:

Table A1. HBS response

RESPONSE	NUMBER OF HOUSEHOLDS	%	% OF EFFECTIVE SAMPLE
i. Sampled households	6,325	100.0	-
ii. Ineligible households (e.g. vacant, demolished, derelict etc.)	376	5.9	-
iii. Effective sample ((i) less (ii) above)	5,949	-	100.0
iv. Participating households	3,691	58.4	62.0
v. Refusals	1,628	25.7	27.4
vi. Households at which no contact could be obtained	630	10.0	10.6

The following table presents the survey sampling distribution by district and household size of the participating households:

Table A2. Participating households by household size and district

HOUSEHOLD SIZE	SOUTHERN HARBOUR	NORTHERN HARBOUR	SOUTH EASTERN	WESTERN	NORTHERN	GOZO AND COMINO	TOTAL
1	127	181	97	60	67	57	589
2	232	334	156	141	169	99	1131
3	159	231	149	123	113	57	832
4	127	210	160	133	141	53	824
5+	75	79	48	44	35	34	315
Total	720	1,035	610	501	525	300	3,691

Weights

The initial weighting for households was designed such that the participating sample of households was representative of the household population of Malta and Gozo. The initial design weight was calculated as follows:

$$\text{Initial design weight} = \frac{\text{number of households in population as at Q3 2015}}{\text{number of households with completed interview in HBS sample}}$$

Further adjustments and calibrations were then made to compensate for unit non-response and ensure an equal and adequate representation of households in each batch. Weighting and calibrations were carried out based on the following variables: household size, batch number, and number of persons by age and sex.

The following table presents the national distribution of households by district and household size after applying a weight to each participating household:

Table A3. Household distribution by household size and district

HOUSEHOLD SIZE	SOUTHERN HARBOUR	NORTHERN HARBOUR	SOUTH EASTERN	WESTERN	NORTHERN	GOZO AND COMINO	TOTAL
1	8,318	13,037	6,294	4,141	4,858	3,614	40,262
2	8,755	15,649	5,935	5,471	8,418	3,722	47,950
3	6,001	10,746	5,705	5,177	5,768	2,069	35,465
4	4,389	8,249	4,890	4,534	5,924	1,783	29,770
5+	2,753	3,353	1,384	1,408	1,463	1,008	11,368
Total	30,216	51,035	24,207	20,732	26,430	12,195	164,815

FIELDWORK, QUALITY CONTROL AND ANALYSIS PROCESS

Various control measures were applied throughout the survey process to ensure that the work was being carried out to the highest possible quality standards. The main types of errors that affect the reliability of the survey are sampling and non-sampling errors. The latter includes non-response bias, item non-response and incorrect reporting of certain items like demographic variables and expenditure.

The NSO took various measures as a precaution to mitigate the negative effects of non-sampling errors. A pilot study of over 85 households was also carried out a few months prior to the actual survey to test the efficacy of the HBS questionnaire and identify any potential interpretation problems. This helped highlight problems in the questionnaire which could hinder the quality of results, and thus correct them in preparation for the full-scale survey.

A large-scale national publicity campaign was undertaken at the beginning of the fieldwork to increase general awareness about the importance of the survey.

Moreover, an introductory letter was sent to all sample households prior to the interviewer's visit explaining the nature and purpose of the survey. An SMS was also sent to a member of each participating household in order to encourage participation. Although co-operation of sample households was mainly obtained by emphasising the importance of the survey and the usefulness of the results, response also benefited from a monetary encouragement offered to each participating household in appreciation of their participation.

Once the screening phase was completed and the co-operation of the households secured, interviewers were tasked with making at least three visits during the survey period to complete the main questionnaire in conjunction with the household and to assist with the filling in of the diaries when required. Although the

diaries were generally completed by the household members themselves, interviewers made a number of checks during their visits to ensure that entries were being recorded correctly.

Upon completion of the two weeks of data collection with the household, the interviewers returned both the diaries and the main questionnaire as one package to the NSO office. Returned surveys were then vetted and in various cases households were re-contacted to clarify any uncertainties. Some households were also randomly called as part of an audit check.

Figure A3. HBS data collection, fieldwork and quality check processes

Once the above checks were completed satisfactorily, the questionnaires were passed on to a team of specially trained coders, where all the items purchased in the diary and some miscellaneous items in the main questionnaire were given a unique code.

Following the coding process, a team of supervisors was tasked with performing logical checks on the data in the surveys. As with the vetting steps, any data uncertainties were clarified and corrected by re-contacting the household. Supervisors also checked the codes given to each item in both the diaries and the main questionnaire. Any coding mistakes were corrected and in some cases, were sent back to the coders for recoding.

The final step of the process was data entry. The coded and checked questionnaires were handed to a team of data entry operators, who were tasked with entering all data into a data entry program designed specifically for HBS 2015. The program included a number of automatic checks to ensure correct data entry. During the data entry process, checks on the data entry in comparison to the diaries and main questionnaire were performed in order to further reduce errors.

The results are based on data collected from sampled households using the survey procedures described above. Therefore, the results are estimates of the values which would have been obtained if all households in Malta had been comprehensively surveyed. The degree of error will depend on how widely particular categories of expenditure vary between households, and the degree of representativeness of the sample in each category.

Human errors, such as non-response, the inability or unwillingness of respondents to provide accurate and complete information, errors and inconsistencies of interviewers and office personnel, are inevitably present in the survey. While every effort was made to minimise these types of errors (through supervision of processes and usage of IT tools), their possible presence and must be borne in mind by the users of this data.

Measures of sampling errors are discussed in detail in Appendix D.

Estimates of precision

As a sample survey, the results of the HBS are not likely to be a perfect representation of all Maltese households' expenditure and income. The results are based on data collected from sampled households using the survey procedures described in the methodology. These are therefore estimates of the values which would have been obtained if all households in Malta had been perfectly surveyed.

The degree of error will depend on how widely particular categories of expenditure (or income) vary between households and the degree of representativeness of the sample in each category. The term error is used here in the technical sense to describe variations and biases in the data collected.

The difference between sample estimates and population parameters caused by observing a sample instead of the whole population is known as sampling error. This type of error is smallest for the expenditure of large groups of households on items purchased frequently and when the level of spending does not vary significantly between different households. Conversely, it is largest for small groups of households, and for items purchased infrequently or for which expenditure varies considerably between households.

A numerical measure of the magnitude of the differences between sample estimates (proportion, average and total) and the value of the entire population is provided by the measurement known as the standard error.

In turn, the standard error is usually expressed as a margin of error which quantifies uncertainty about a survey result and expresses the amount of random sampling error in a survey's results. This is normally associated with a statistical level of confidence in such a way as to make it possible for us to calculate confidence intervals of the form estimate \pm margin of error. Then, the margin of error may be calculated as 1.96 times the standard error on either side of the estimate, if a 95% confidence level is considered. A further correction is made to this estimate to correct for inefficiencies in the sample.

In some tables in the report, the percentage margins of errors are shown. These are simply the margins of error as a percentage of the quantity (normally the average) to which it refers. Estimates with a percentage margin of error greater than 40% were omitted from the respective tables as these represent highly volatile and unreliable survey estimates. Other estimates with a relatively high but acceptable margin of error were highlighted.

The following table is a summary of the margin of error and percentage margin of error estimated at a 95% confidence level for average annual household expenditure by type of commodity or service.

Main item	Average household consumption expenditure	Margin of error	% Margin of error	95% confidence interval
Food and non-alcoholic beverages	4,417	89	2.0	€4,417 ± €89
Alcoholic beverages and tobacco	525	34	6.5	€525 ± €34
Clothing and footwear	1,768	120	6.8	€1,768 ± €120
Housing, water, electricity, gas and other fuels	1,875	124	6.6	€1,875 ± €124
Furnishing, household equipment and maintenance of the house	1,655	103	6.3	€1,655 ± €103
Health	1,252	123	9.8	€1,252 ± €123
Transport	3,181	175	5.5	€3,241 ± €175
Communication	970	33	3.4	€970 ± €33
Recreation and culture	1,799	296	16.5	€1,739 ± €296
Education	624	69	11.0	€624 ± €69
Restaurants and hotels	1,857	87	4.7	€1,857 ± €87
Miscellaneous goods and services	2,423	119	4.9	€2,423 ± €119
Total	22,346	654	2.9	€22,346 ± €654

These margins of error are used as a measure of the precision of the average expenditures shown. The 95% confidence intervals around survey estimates mean that if it were possible to repeat the survey 100 times, in 95 instances the confidence interval would contain the population mean.

For example, if the average consumption expenditure on Food and non-alcoholic beverages is €4,417 and the corresponding margin of error is €89, then the 95% confidence interval for consumption expenditure on Food and non-alcoholic beverages is the range €4,328 to €4,506, i.e. €4,417 ± €89.

The next table illustrates estimates of precision for a range of derived percentage rates (p) and the corresponding (weighted) number of persons or households (N) over which the rates are computed.

Percentage rate (p)	14,815	24,315	34,315	45,215	57,915	74,415	93,915	164,815	364,474	424,074
0.01	2.10%	1.32%	1.10%	0.99%	0.66%	0.66%	0.44%	0.33%	0.33%	0.22%
0.03	3.64%	2.32%	1.99%	1.65%	1.10%	1.10%	0.77%	0.55%	0.44%	0.33%
0.06	5.07%	3.20%	2.76%	2.32%	1.65%	1.43%	1.10%	0.88%	0.66%	0.55%
0.1	6.51%	4.08%	3.42%	2.87%	1.99%	1.88%	1.43%	1.10%	0.88%	0.66%
0.2	8.60%	5.40%	4.63%	3.86%	2.76%	2.43%	1.88%	1.43%	1.10%	0.88%
0.4	10.59%	6.62%	5.63%	4.74%	3.31%	2.98%	2.32%	1.76%	1.43%	0.99%
0.5	10.81%	6.84%	5.74%	4.85%	3.42%	3.09%	2.43%	1.76%	1.43%	1.10%
0.6	10.59%	6.62%	5.63%	4.74%	3.31%	2.98%	2.32%	1.76%	1.43%	0.99%
0.7	9.93%	6.29%	5.29%	4.41%	3.09%	2.87%	2.21%	1.65%	1.32%	0.99%
0.8	8.60%	5.40%	4.63%	3.86%	2.76%	2.43%	1.88%	1.43%	1.10%	0.88%
0.9	6.51%	4.08%	3.42%	2.87%	1.99%	1.88%	1.43%	1.10%	0.88%	0.66%

For example, if the proportion of households who owned a garage stood at 50 per cent, calculated out of the total number of 164,815 households, then this percentage has a margin of error of 1.76 per cent, and hence the 95% confidence interval is the range 48.24 per cent to 51.76 per cent, i.e. $50\% \pm 1.76\%$.

As for the case of average amounts, estimates for percentage rates with a percentage margin of error greater than 40% (approximately equivalent to cells based on less than 20 counts) were omitted from their respective tables due to their unreliability. These are represented by the shaded margins of error in the table above.

Other types of errors which influence the results in this report are non-sampling errors. Non-sampling errors are caused by other factors mentioned so far, such as non-response, the inability or unwillingness of respondents to provide accurate and complete particulars, errors and inconsistencies by interviewers and office personnel etc. While every effort was made to minimise these types of errors, they are still present and must be borne in mind by the users of these data.

- Fully-detached house (include: villa, bungalow, converted farmhouse, etc.)..... ☐ 3
- Ground-floor tenement having its own airspace (without an overlying habitation)..... ☐ 4
- Ground-floor tenement without its own airspace (having an overlying habitation)..... ☐ 5
- Maisonette..... ☐ 6
- Flat/penthouse in a building with 10 dwellings or more..... ☐ 7
- Flat/penthouse in a building with less than 10 dwellings..... ☐ 8
- Farmhouse (unconverted)..... ☐ 9
- Suite of rooms forming part of a housing unit..... ☐ 10
- Garage..... ☐ 11
- Cellar..... ☐ 12
- Boathouse..... ☐ 13
- Yacht..... ☐ 14
- Caravan, fixed or mobile..... ☐ 15
- Other type? ☐ 16 State which? →

E2 How many rooms does this dwelling contain? (Exclude those used for business and/or professional purposes)

Note: A room should be large enough to hold a bed (at least 4 square metres) and whose height is at least 2 metres high. Combined/open plan rooms should be counted separately.

- **Include:** kitchens, bedrooms, dining rooms, living or sitting rooms, habitable rooms in cellar or basement, other spaces used or intended for habitation.
- **Exclude:** kitchenettes, corridors, verandahs, halls, washrooms, bathrooms, showers, toilets and garages.

E3 In which year was the dwelling constructed?

- | | |
|--|--|
| 1918 or before..... <input type="checkbox"/> 1 | 1971 - 1980..... <input type="checkbox"/> 7 |
| 1919 - 1945..... <input type="checkbox"/> 2 | 1981 - 1990..... <input type="checkbox"/> 8 |
| 1946 - 1955..... <input type="checkbox"/> 3 | 1991 - 1995..... <input type="checkbox"/> 9 |
| 1956 - 1960..... <input type="checkbox"/> 4 | 1996 - 2000..... <input type="checkbox"/> 10 |
| 1961 - 1965..... <input type="checkbox"/> 5 | 2001 - 2005..... <input type="checkbox"/> 11 |
| 1966 - 1970..... <input type="checkbox"/> 6 | after the year 2005..... <input type="checkbox"/> 12 → year <input type="text"/> |

E4 In which year did you buy/inherit or were given this dwelling?

Sena

E5 Is this dwelling...

- | | | |
|---|----------------------------|-------|
| Yours, purchased..... | <input type="checkbox"/> 1 | → E6 |
| Yours, given for free (include inheritance) | <input type="checkbox"/> 2 | |
| Rented furnished (below €185 per month) | <input type="checkbox"/> 3 | → E17 |
| Rented furnished (€185 or more per month) | <input type="checkbox"/> 4 | |
| Rented unfurnished (below €185 per month) | <input type="checkbox"/> 5 | |
| Rented unfurnished (€185 or more per month) | <input type="checkbox"/> 6 | |
| Used free of charge | <input type="checkbox"/> 7 | |

E6 Do you have an outstanding loan on this dwelling?

- | | | | | |
|------------------------|----------------------------|-----------------------------------|----------------------------|-------|
| Yes, to the bank | <input type="checkbox"/> 1 | Yes, to someone or an institution | <input type="checkbox"/> 3 | → E17 |
| Yes, to the government | <input type="checkbox"/> 2 | No | <input type="checkbox"/> 4 | |

E7 Enter the MINIMUM monthly loan repayment on the house loan.

 €

E8 Enter the TOTAL MONTHLY repayment on the loan (include also any added sums of money that are given to the bank on a regular basis in order to end the loan before the stipulated time).

 €

E9 If any extra payments were made, apart from those mentioned in E8. ENTER THE TOTAL AMOUNT that was paid during last year.

 €

E10 What was the initial loan amount, that is, the principal?

 €

E11 In which year was the initial loan taken out?

Year

E12 Over how many years was the loan to be repaid, that is, the term of the loan?

Term of loan

E13 What is the annual interest rate on this loan? (If the interest rate is a variable rate, take the current interest rate, and if the interest rate is subsidised, give the total interest rate)

Percentage annual interest rate

E14 Do you have any subsidy on this interest rate?

YES from government <input type="checkbox"/> ₁ → E15	YES from workplace <input type="checkbox"/> ₂ → E15	NO <input type="checkbox"/> ₃ → E17
---	--	--

E15 Indicate the reference number of the person that received this benefit.

Reference number

E16 Indicate the net rate at which you are paying the loan

Net rate

SECONDARY DWELLINGS:

E17 Do you have a secondary dwelling (e.g. holiday flat) that is not used for business purposes?

- Yes, owned by the family ☐ ₁
- Yes, rented during for the whole year ☐ ₂
- Yes, rented for some months during the year but used on regular basis by the household ☐ ₃
- Yes, on a timeshare basis ☐ ₄
- No ☐ ₅

GARAGES

E18 Indicate the number of garages for personal use...?

- a. You own and form part of the main dwelling
- b. You own and do not form part of the main dwelling
- c. You rent and form part of the main dwelling
- d. You rent and do not form part of the main dwelling
- e. No garages for private use

PURCHASING OF PROPERTY AND/OR LAND:

E19 Indicate whether you have bought any property and/or land (not for business purposes) during the last 12 months

Type	Total Price	Notary service	from which:		
			Tax	Commissions	Other services
a. Land	€	€	€	€	€
b. Main dwelling	€	€	€	€	€
c. Secondary dwelling	€	€	€	€	€
d. Other dwelling	€	€	€	€	€
e. Garage	€	€	€	€	€
f. Parking space	€	€	€	€	€

CONSUMER DURABLES

E20 Indicate the number of vehicles that were used by household members during the last 12 months

- a. Motor cars
- b. Vans
- c. Trucks
- d. Motorcycles
- e. Watercraft/Aircraft

Owned	Used free of charge

E21 If any vehicle used by household member for private purpose undertaken a VRT test during the last 12 months, write the total cost spent on VRT test for all the vehicles that were tested.

€

E22 Indicate the number of household commodities that are used by household members (in main dwelling, secondary dwelling, etc.)

- a. Television
- b. Satellite dish/antenna
- c. Water heater (Geaser)
- d. Solar water heater
- e. Gas water heater
- f. Central air-conditioning system
- g. Air-conditioning system
- h. Solar/photovoltaic panels (write down the number of units installed)

Number

SECTION F

RENT ON MAIN DWELLING

Questions F1 to F5 are applicable ONLY to persons residing in rented dwellings

F1 How much was your last rent payment on your main dwelling?

€

F2 How many weeks did this amount cover?

F3 Does this rent cover:

Yes

No

a. Water and electricity?

☐ ₁
☐ ₂

b. Telephone?

☐ ₁
☐ ₂

c. Cable TV?

☐ ₁
☐ ₂

d. Gas?

☐ ₁
☐ ₂

e. House insurance?

☐ ₁
☐ ₂

f. Regular maintenance and repairs?

☐ ₁
☐ ₂

g. Condominium?

☐ ₁
☐ ₂

F4 Did you have any subsidies on your rent during the last 12 months?

Yes, from local government 1

☐ ₁

Yes, from your employer 2

☐ ₁

No 3

☐ ₁

→ F6

F5 What is the amount of subsidies that you received during the last 12 months?

€
