Preface

We are very pleased to present the ninth edition of the IMD World Talent Ranking (WTR). We are happy to be including Bahrain in this year's edition.

The 2022 WTR is being launched in a context of continuous worldwide disruptions. While the pandemic that brought a health and an economic crisis seems to have subsided in most parts of the world, the re-emergence of geopolitical risks has introduced fresh turmoil into the international system. The economic crisis is continuing in different parts of the world and the invasion of Ukraine by Russia puts geopolitical risk at the forefront of the minds – and therefore decision-making process – of politicians and businesspeople.

Over the course of the past two years, many of us have become accustomed to the prevalence of terms such as 'remote working' and 'home office'; but suddenly companies seem to be reevaluating their policies regarding teleworking.

The 2022 WTR highlights that today's most talent-competitive economies possess the ability to develop and retain their home-grown skilled labor while providing an environment that attracts foreign skilled labor and retains both domestic and international talent.

In addition, now that we can compare our 2019 findings with those of 2022, we find pre- and post-pandemic patterns with respect to brain drain. These suggest that COVID-19 has had a profound impact on skilled individuals' decisions to leave a particular country. Faced with this crippling of talent's mobility, the economies that subsequently strengthened their quality of life as well as their commitment to environmental issues managed to boost their appeal which benefitted their talent competitiveness.

The total number of economies that the 2022 WTR assesses is 63; two economies fewer than you may have expected. The reason behind this is that the reliability of the data collected for Russia and Ukraine was limited and therefore these two economies have not been included in this year's edition.

We are eternally grateful to our many stakeholders for the support and assistance they provide: our global network of partner institutes, the IMD alumni community and our executive opinion formers who, together, offer crucial data and insights in order to complete not just our Talent Ranking, but our entire yearly offering.

The IMD World Competitiveness Center

For more than thirty years, the IMD World Competitiveness Center has pioneered research on how countries and companies compete to lay the foundations for sustainable value creation. The competitiveness of nations is probably one of the most significant developments in modern management and IMD is committed to leading the field. The World Competitiveness Center conducts its mission in cooperation with a network of 56 Partner Institutes worldwide to provide the government, business and academic communities with the following services:

- › Competitiveness Special Reports
- › Competitiveness Prognostic Reports
- › Workshops/Mega Dives on competitiveness
- › IMD World Competitiveness Yearbook
- › IMD World Digital Competitiveness Ranking
- › IMD World Talent Ranking

The IMD World Competitiveness Center team:

At IMD:

Professor Arturo Bris	Director of The IMD World Competitiveness Center
Christos Cabolis	Chief Economist & Head of Operations
José Caballero	Senior Economist
Madeleine Hediger	Data Research and Online Services Specialist
Catherine Jobin	Order and Sales Administrator
Odete Madureira	Center Coordinator
William Milner	Research Projects Associate Manager
Marco Pistis	Research Specialist
Maryam Zargari	Research Specialist

At KAESCO Consulting:

Jean-François Kaeser

We also have the privilege of collaborating with a unique network of Partner Institutes, and other organizations, which guarantees the relevance of the data gathered.

1. Introduction

The IMD World Talent Ranking (WTR) evaluates the capacity of an economy to develop the skills and competences of its domestic talent and, at the same time, to appeal to the international talent pool so it satisfies the local market's employment demand and enhances its overall competitiveness.

The WTR studies 63 economies by quantifying 31 criteria that are allocated to one of three factors: The Investment & Development factor considers the domestic resources committed to cultivate homegrown talent. The Appeal factor evaluates the ability to attract and retain talent from both the international and domestic markets. And the Readiness factor quantifies the quality of the available skills and competences in the talent pool.

The ninth edition of the WTR is launched in the context of continuous worldwide disruptions. While the pandemic that brought a health and an economic crisis seems to have subsided, the re-emergence of geopolitical risks has introduced further turmoil to the international system.

During the pandemic, economies that had the technological infrastructure to allow part of the labor force to

work remotely fared more effectively in their responses to lockdowns. Of course, the disruptions originating from travelling restrictions and economy-wide lockdowns affected the flows (inward and outward) of skilled employees. It was expected that skilled labor would not necessarily leave their country of origin. Remote working, however, enabled skilled talent to work from different parts of the world, which allowed for a relatively sustainable access to talent. By contrast, this year we observe a shift away from working remotely because many companies are thinking twice about distance work, expecting employees to return to the workplace. How will this affect the brain drain that affected different economies in the pre-pandemic world?

In section two we will study the overall regional trends for talent competitiveness, comparing strengths with areas for improvement around the world. Section three will narrow the analysis by outlining the talent competitiveness landscape for the ten highest-ranked economies. In section four, we explore talent mobility by comparing relevant criteria for the pre-pandemic year (2019) and post pandemic 2022. Section five concludes.

2. Regional trends

Last five years

Figure 1 depicts the evolution of regional trends for the last five years (2018-2022). During that period, Western European economies have dominated the WTR, exhibiting a very different trajectory to that of North American economies. The latter experience a slight increase this year, exchanging second place with Eastern Asia which experienced a decline. Conversely Ex-CIS & Central Europe together with South America still lag behind with respect to other regions across the world; they struggle to sustain favorable conditions for talent retention and attraction.

2022

Figure 2 details the prevailing strength of Western European across all three factors. Eastern Asian economies follow in the Investment & Development and Readiness factors, showcasing the importance that these economies place on education and the development of local talent. The performance of Eastern Asia, in addition, benefits from a solid alignment between the talent needs of the private sector (Readiness) and the talent provided by the educational system of the countries in the area (Investment & Development). North America takes second place in the Appeal factor,

Figure 1: Evolution of average talent performance between 2018 and 2022 by subregion. Source: IMD (2022)

Figure 2: Average talent competitiveness factor ranking by region in 2022. Source: IMD (2022)

outlining the attractiveness of the USA and Canada for the international talent pool of highly skilled professionals that the region manages to retain.

The weaknesses we have discussed in previous editions of the WTR with respect to the performances of Eastern Europe and Southern Asia & the Pacific remain: Eastern European economies place a strong emphasis on education and the development of local talent (in the Investment & Development factor, it was third out of eight subregions). However, they are not able to retain that talent nor to appeal to the international talent pool for their talent needs (hence: Appeal factor, sixth; Readiness factor, sixth).

By comparison, the Southern Asia & the Pacific subregion performs below average in the development of local talent (Investment & Development factor, sixth). The

fact that the subregion manages to attract highly skilled talent from the international talent pool (Appeal, third) safeguards the skills and competences that are needed in the local job market of these economies (Readiness, fourth). Both subregions (Eastern Europe and Southern Asia & the Pacific), however, fail to balance developing and retaining their domestic talent with enticing an international talent pool. Being able to do so is a huge enable for talent competitive regions.

South America and Ex-CIS & Central Europe show the lowest performances Overall and across the three factors. The former has particularly difficult issues in terms of its local talent development and the readiness of its talent pool (Investment & Development, eighth; Readiness, eighth) while the latter fails to attract overseas talent to support its economies (Appeal, eighth).

3. Top ten economies in terms of their talent competitiveness

The overall results of the 2022 WTR show a fair degree of year-to-year stability among the top 10 economies, with six out of 10 remaining in the same position. The results also highlighted the talent prowess of the Nordic countries, which occupy every place from second to sixth.

Switzerland remains in the top spot followed – in descending order – by Sweden, Iceland, Norway, Denmark then Finland. Luxembourg drops to seventh place, while Austria falls to eighth. The Netherlands and Germany remain in ninth and 10th position, respectively.

Switzerland performs robustly across all factors, ranking first in Investment & Development and in Appeal, and second in Readiness. At the indicator level, there are strengths across the board. The country reaches first place in several criteria including the effective implementation of apprenticeships, attracting foreign highly skilled personnel and the availability of finance skills and of managers with international experience. Switzerland ranks second in the prioritization of employee training by the private sector, the level of motivation of the labor force and the availability of language skills. There is, however, room for improvement which would enable the country to sustain its talent competitiveness; the quality of education as measured by pupil-teacher ratio remains relatively low, with the economy ranking 36th in the primary school indicator and 32nd in the secondary school one. In the female labor force (as a percentage of the total labor force) indicator, the country ranks 26th and in that of graduates in science, 28th. Despite ranking fourth in quality of life, in a related criterion – exposure to particle pollution – Switzerland ranks 15th.

Sweden remains in second spot by performing strongly in Appeal (second) and to a lesser extent in Readiness (sixth) and Investment & Development (seventh). It reaches its highest rank at the criteria level in the impact of brain drain and in the exposure to particle pollution, placing second in both. Other areas of strength are the availability of language skills and of competent senior managers (third in both). While in its fairness of the administration of justice Sweden ranks fourth, it reaches fifth position in the prioritization that its private sector assigns to talent attraction and retention, and in total public expenditure on education. Similarly to Switzerland, the country's position in quality of education is relatively low, ranking 23rd in the primary-school indicator and 35th in the secondary school one. The effective implementation of apprenticeship and the health infrastructure as well as attracting foreign highly skilled staff show a relatively low performance ranking 19th, 16th and 17th, respectively. Other areas of improvement include graduates in sciences (20th) and student

mobility inbound (foreign tertiary-level students per 1,000 inhabitants, 29th).

Iceland moves up to third position (from seventh) mainly due to its performance in the Investment & Development (fourth) and in Appeal (eighth). It ranks 13th in the Readiness factor. Iceland's strengths include total public expenditure on education (fourth) and expenditure per student (third) as well as the availability of skilled labor and finance skills (third in both) and the quality of life (third). In the effectiveness of university education and the availability of language skills, it ranks fourth. It also performs well in the pollution indicator (fifth), the level of worker motivation and the impact of brain drain (sixth in both). Among Iceland's weaknesses are the implementation of apprenticeships (42nd), the prioritization of employee training (35th) and the female labor force (31st). The impact of the relatively low performance in attracting highly skilled staff (34th) is felt in the availability of managers with international experience (35th). In the PISA assessment (survey of 15-year-olds), Iceland ranks 30th and more problematic for the long-term talent competitiveness of the country, in graduate in sciences, it places at 53rd.

Norway remains in fourth position overall, ranking fifth in Investment & Development, ninth in Appeal and 14th in Readiness. At the indicator level, it ranks first in the availability of skilled labor, second in the availability of finance skills, fourth in the impact of brain drain and fifth in both the total public expenditure on education per student and the pupil-teacher ratio (primary education). Norway also performs well in the implementation of apprenticeships (sixth), in the prioritization of talent attraction and retention (seventh) and the level of worker motivation (eighth). Its performance could improve in the area of the female labor force and the availability of managers with international experience (21st in both) as well as in the PISA assessment (22nd), student mobility inbound (36th) and graduates in sciences (41st). In addition, a drop in the effectiveness of the health infrastructure (from 10th to 17th), may signal some issues of concern for the future.

Denmark also remains stable in fifth position. It ranks second in Investment & Development and eighth in Readiness but its performance in Appeal is relatively weaker at 17th. Its performance is robust in several indicators; it ranks first in the prioritization of employee training, the prioritization of talent attraction and retention, worker motivation, brain drain and the availability of competent senior managers. In the availability of skilled labor, Denmark ranks relatively well at 14th, but this represents a decline when compared to last year's fifth. Despite improving to the 34th spot (from 40th), the

country's ranking in the graduates in sciences indicator remains relatively deficient and, to a lesser extent, so does its performance in the pupil-teacher ratio for secondary school (27th).

Finland improves to the sixth spot from eighth, ranking 11th in Investment & Development, 11th in Appeal and moving up from fifth to fourth in the Readiness factor. Its overall improvement is due largely to its stronger performance in indicators including in worker motivation (fourth, up from 10th), quality of life (first, up from seventh) and the effectiveness of the health infrastructure (third, up from fourth). Its improvement is also supported by remaining in the top position in the justice, pollution and the effectiveness of primary and secondary education indicators, and among the top five places in the effectiveness of university education and management education (third in both). Finland's weaker performance is in attracting foreign highly skilled personnel (42nd), the quality of education (pupil-teacher ratio, 37th in secondary education and 24th in primary), student mobility inbound (22nd) and the availability of skilled labor (27th).

Luxembourg declines four places to seventh position dropping across all talent factors. In Investment & Development, it falls to third (from second), in Appeal to fifth (from second) and in Readiness to 25th (from 23rd). Under Investment & Development, Luxembourg experiences a sharp drop in the implementation of apprenticeships (26th from 15th) and the prioritization of employee training (29th from 11th). Within the Appeal factor, the significant declines are in worker motivation (27th from 13th), brain drain (23rd from 12th) and the fair administration of justice (21st from 10th). In the Readiness factor, the main declines are in availability of finance skills (32nd from 21st), availability of competent senior managers (45th from 37th), and in the effectiveness of university education (38th from 30th) and of management education (35th from 24th). Luxembourg's main strengths are in the total public expenditure on education per student (first), quality of education in primary school (third), attracting highly skilled staff (seventh) and the availability of language skills (sixth). Among its lowest performance are graduates in science (50th), female labor force and the availability of skilled labor (52nd in the latter two).

Austria drops to eighth position (from sixth) while remaining in sixth spot in Investment & Development, but slightly declining in Appeal to 10th (from eighth) and reading to 15th (from 14th). Under Investment & Development, Austria remains in the top spot in the health infrastructure indicator and in third place in the implementation of apprenticeship programs but declines to third (from first) in the prioritization of employee

training and to 17th (from 12th) in the quality of education in primary school. In Appeal, Austria drops in the prioritization of talent attraction and retention indicator from sixth to 13th, in worker motivation from third to ninth, in attracting overseas highly skilled staff from 18th to 22nd and in the fair implementation of justice from 17th to 23rd. In the Readiness factor, the country's strengths are in student mobility inbound (seventh) and graduates in science (eighth). The availability of skilled labor (54th) and of competent senior manager (36th), and PISA assessment (28th) are among the lowest ranking criteria for Austria in Readiness.

The Netherlands ranks ninth overall, remaining in the same position as last year. It slightly advances one spot in the Investment & Development factor to 16th and two places in Appeal to third. It drops two positions in Readiness ranking to ninth. The Netherlands' strengths include the prioritization of talent attraction and retention, attracting overseas highly skilled personnel and the effectiveness of university and management education (second in all of these indicators). Other strengths are worker motivation and the fair administration of justice (third in both) as well as the implementation of apprenticeships, the prioritization of employee training and brain drain (fifth in the three 3 indicators). Conversely, the Netherlands' performance is weaker in the quality of education criteria ranking 39th in the primary school measure and 50th in secondary school. Its lowest ranking criterion is graduates in sciences (51st).

Germany also remains in the same position (10th). It drops one place in Investment & Development and two spots in Readiness ranking 12th in both factors. In Appeal, conversely, Germany improves increasing from ninth to the seventh. In Investment & Development, despite ranking second in the implementation of apprenticeships, Germany's performance in other criteria in the factor is relatively deficient. It ranks 39th in total public expenditure on education, 32nd in pupil-teacher ratio (primary education), 38th pupil-teacher ratio (secondary education) and to a lesser extent in female labor force (28th). Its performance in Readiness is similar ranking fourth in graduates in sciences and sixth in the effectiveness of university education but reaching the 40th place in the availability of skilled labor (which represents an improvement of three positions), 31st in the availability of competent senior managers and 27th in the availability of language skills. Germany's strengths in the Appeal factor include the quality of life and the fair administration of justice (ninth in both) and the prioritization of talent attraction and retention by the private sector.

4. Rises and falls in the talent mobility landscape

The COVID-19 pandemic had and keeps having a lasting impact on the talent competitiveness of the economies tracked in this report. Results from the 2021 edition of the WTR emphasized the fact that talent competitiveness in a post-pandemic context would greatly depend upon on the level of motivation of the workforce. The boosting of that motivation goes beyond economic incentives such as remuneration and is increasingly linked to a country's quality of life, the impact of organizational leadership in cementing the motivation among members of the workforce, the competence and the international experience of business leaders. Another element that significantly contributes to worker motivation in highly talent-competitive economies includes retraining opportunities for members of staff.

The aforementioned elements continue to be the main drivers of talent competitiveness in 2022, as well. Building on these results, however, our findings this year show how these trends, paired with country-specific socio-economic developments that are explained below, are shaping the landscape of the highly ranked economies. In this context, it is particularly interesting to look at the shifts happening in the Appeal factor, which measures the ability to retain homegrown talent while complementing the needs of the economy by drawing from the international talent pool.

Figure 3 showcases the performances in the Appeal factor of the 63 economies under study in 2019 (before the pandemic started) and in 2022. Economies above the 45-degree line improved their performances in the Appeal factor in the three years. More specifically, the closer an economy is to the top-left corner of the chart, the larger its improvement has been between 2019 and 2022 values. The opposite is also true; countries closer to the bottom-right corner of the chart are those that experienced the largest decline in performance in Appeal during the same time frame. The size of the bubble captures the level of GDP per capita at purchasing power parity (PPP). The chart suggests that most of the economies under study experienced a decline in Appeal between pre and post pandemic. This supports our narrative that COVID-19 deeply impacted economies' ability to attract and retain highly skilled workers.

Furthermore, the chart shows that countries that have improved their Appeal in the early post-pandemic era are not those with the highest income levels. Saudi Arabia is the country that improved the most its Appeal between 2019 and 2022. Across different Appeal levels, we observe that several Central & Eastern European economies (Czech Republic, Croatia, Slovak Republic) as well as Mongolia also improved. Conversely, economies such as the US, Canada, the UAE, Denmark,

Figure 4: “Brain drain does not hinder competitiveness” (score 0-10) in 2019 – 2022. Source: IMD (2022)

New Zealand, Hong Kong, Indonesia, South Africa and Venezuela display the largest declines.

While COVID-19 represents the common thread behind these changes, each economy's evolution is affected by its locally specific socio-economic factors. In this sense, **Figures 4 and 5** add color to the overall picture given by **Figure 3**. They follow the same structure of **Figure 4**, and they exhibit the evolution of “brain drain” and “brain gain” indicators respectively. The “brain drain” indicator assesses whether the degree of local, homegrown talent emigration from one economy to another represents a problem for the country's competitiveness (with zero indicating a serious brain drain issue for the economy and ten signifying an absence of issues created by brain drain). The “brain gain” indicator assesses the general level of attractiveness of a country for foreign highly skilled workers, with zero signifying low attractiveness and 10 high attractiveness.

A first observation is that the increase in Appeal that Saudi Arabia has experienced is not linked to brain drain. Other factors such as a decrease in the cost of living, an increase in quality-of-life scores and ambitious investment plans seemed to have played a bigger role in lifting Saudi Arabia's Appeal score.

Improvements in the brain drain and the brain gain indicators are, however, key to explaining the rise in Appeal scores for the Czech Republic, Croatia and the Slovak Republic. All of them show clear progress in both dimensions between 2019 and 2022.

Elsewhere, brain drain and brain gain are key drivers of declines in the Appeal variable for New Zealand and the UAE, which experienced a marked increase in brain drain concerns as well as a lesser one in attracting foreign highly skilled professionals. Hong Kong exhibits major difficulties in both tackling brain drain and supporting brain gain. Other economies at the top the WTR 2022, such as Denmark, Canada and the US have improved their capacity to retain local, homegrown talent but have lost some ground in attracting new, foreign highly skilled professionals.

In sum, the pandemic has strongly impacted the landscape of talent mobility. It had a direct impact on the capacity of most of the economies under study to retain local, highly skilled personnel and to attract foreign talent, affecting in turn their Appeal levels. The talent hubs landscape is therefore bound to change.

5. Conclusions

The 2022 WTR brings forth familiar themes. Talent-competitive economies have the ability to develop their homegrown highly skilled labor while providing an environment that is so appealing that it attracts and retains both domestic and international talent. The development of local talent depends on a strong education system as well as life-long learning opportunities provided by companies through apprenticeships, internships and employee training.

An appealing environment for talent is fostered by good remuneration, a lower level of taxes and a cheaper cost of living, together with a higher quality of life (affected, for instance, by the quality of the education system) and a fair judicial system.

The pre- and post-pandemic patterns with respect to brain drain show that COVID-19 has had a profound

impact on skilled individuals' decisions to leave a particular country. Travel constraints and country lockdowns forced skilled employees to remain in their domestic markets. Talent mobility therefore declined.

However, economies that compensated by strengthening their quality of life as well as their commitment to environmental issues, experienced some increase – however minor – with respect to attracting skilled labor.

Considering some companies' re-evaluation of remote working policies, it remains to be seen how much these trends will persist in the long-term.

The IMD World Talent Ranking methodology

› The IMD World Talent Ranking (WTR) assesses the status and the development of competencies necessary for enterprises and the economy to achieve long term value creation. It does so by using a set of indicators which measure the development, retention and attraction of a domestic and international highly-skilled workforce.

› Based on our research, the methodology of the World Talent Ranking defines Talent Competitiveness into three main factors:

Investment and Development
Appeal
Readiness

› These 3 factors comprise 31 criteria, although each factor does not necessarily have the same number of criteria (for example, it takes more criteria to assess Readiness than to evaluate Investment and Development).

› Each factor, independently of the number of criteria it contains, has the same weight in the overall consolidation of results that is $1/3$ ($3 \times 33.3 \sim 100$).

› Criteria can be hard data, which analyze talent development as it can be measured (e.g. Total Public Expenditure on Education) or soft data, which analyze the quality of these investments as they can be perceived (e.g. Management Education).

› Finally, to compute the overall World Talent Ranking, we aggregate the criteria to calculate the scores of each factor which function as the basis to generate the overall ranking.

I. The structure of the IMD World Talent Ranking

The ranking is structured according to three factors:

- › Investment and development
- › Appeal
- › Readiness

The first factor takes into account the investment in and development of home-grown talent. It traces the size of public investment on education by incorporating an indicator of public expenditure. It also looks at the quality of education through indicators related to pupil-teacher ratios. The development of talent is covered by variables related to the implementation of apprenticeship and the priority of employee training for companies. It also looks at the development of the female labor force. In addition, this factor takes into account the quality of the health infrastructure in terms of meeting the health needs of society.

The appeal factor goes beyond the focus on the local labor force to incorporate the ability of a country to tap into the overseas talent pool. It does so by including indicators such as the cost of living and quality of life in a particular economy. Specifically, it examines the ability of a country to attract highly skilled foreign labor. In addition, it assesses the way enterprises prioritize the attraction and retention of talent. Another component of this factor evaluates the impact of brain drain on the competitiveness of countries. It also takes into account the level of worker motivation. Salary and taxation levels are important for an economy to be able to maintain an effective flow of talent. The appeal factor thus considers remuneration at the management and

services professions levels and personal income tax rates. This factor also incorporates measures of personal security and the protection of private property rights because they play a key role in increasing the attractiveness of a particular economy.

The success of the investment in and development of talent and the ability to attract and retain talent is reflected in the availability of skills and competencies to sustain an economy's talent pool. The readiness factor looks at the context of the talent pool. It considers the growth of the labor force and the quality of the skills available. It also takes into consideration the experience and competencies of the existing senior managers' pool. In addition, the readiness factor focuses, on the ability of the educational system to meet the talent needs of enterprises. It examines the way in which the educational system fulfils the talent demands of the economy, the ability of higher education to meet that demand and the languages skills available. Finally, it considers the mobility of students (inbound) and educational assessment (PISA).

Such a comprehensive set of criteria enables us to observe how countries perform in terms of sustaining their talent pool. In developing the talent ranking, we have omitted measures of the regulation of labor and productivity. The reason for this is because our objective is to assess the development and retention of talent, and the regulation of labor and its focus on conflict resolution could be perceived as peripheral to that objective. Similarly, productivity is an outcome of what we want to assess.

II. Constructing the IMD World Talent Ranking

In order to calculate the IMD World Talent Ranking, we normalize criteria data using the same STD methodology used in the IMD World Competitiveness Yearbook

- › Average the criteria STDs to generate the three talent factors
- › Aggregate factors to build the overall talent ranking
- › Normalize the factors and overall ranking to the 0-100 range to facilitate the interpretation of results.

We employ this methodology to rank the countries' evolution in talent aspects from 2013 onward. However, there are some caveats. For certain years, our sample varies

according to the evolution of the IMD World Competitiveness Yearbook. That is to say, some countries appear in the talent ranking only for the years since they became part of the Yearbook. For example, talent rankings for Mongolia are available from 2015 onward and Cyprus and Saudi Arabia are available only from 2017.

Additionally, hard data may not be available for specific countries in specific years. Whenever possible, we use the most recent data available.

What is the IMD World Talent Ranking?

World Talent Ranking Factors

Computing the Rankings

Table 1: Sample size (2018-2022)

Years	2018	2019	2020	2021	2022
Countries	63	63	63	63	63

Table 2: Criteria definitions and survey questions

Investment & Development

Total public expenditure on education	Percentage of GDP
Total public expenditure on education per student	Spending per enrolled pupil/student, all levels
Pupil-teacher ratio (primary education)	Ratio of students to teaching staff
Pupil-teacher ratio (secondary education)	Ratio of students to teaching staff
Apprenticeships	Apprenticeships are sufficiently implemented
Employee training	Employee training is a high priority in companies
Female labor force	Percentage of total labor force
Health infrastructure	Health infrastructure meets the needs of society

Appeal

Cost-of-living index	Index of a basket of goods & services in the main city, including housing (New York City = 100)
Attracting and retaining talents	Attracting and retaining talents is a priority in companies
Worker motivation	Worker motivation in companies is high
Brain drain	Brain drain (well-educated and skilled people) does not hinder competitiveness in your economy
Quality of life	Quality of life is high
Foreign highly-skilled personnel	Foreign highly-skilled personnel are attracted to your country's business environment
Remuneration in services professions	Gross annual income including supplements such as bonuses, US\$
Remuneration of management	Total base salary plus bonuses and long-term incentives, US\$
Collected personal income tax rate	On profits, income and capital gains, as a percentage of GDP
Justice	Justice is fairly administered
Exposure to particle pollution	Mean population exposure to PM2.5, Micrograms per cubic metre

Readiness

Labor force growth	Percentage change
Skilled labor	Skilled labor is readily available
Finance skills	Finance skills are readily available
International experience	International experience of senior managers is generally significant
Competent senior managers	Competent senior managers are readily available
Primary and secondary education	Primary and secondary education meets the needs of a competitive economy
Graduates in Sciences	% of graduates in ICT, Engineering, Math & Natural Sciences
University education	University education meets the needs of a competitive economy
Management education	Management education meets the needs of the business community
Language skills	Language skills are meeting the needs of enterprises
Student mobility inbound	Foreign tertiary-level students per 1000 inhabitants
Educational assessment - PISA	PISA survey of 15-year olds

Notes and Sources by Criteria

The source of the survey criteria is always :

IMD World Competitiveness Center's Executive Opinion Survey 2022.

Which was conducted from mid-February to early May 2022, with a total number of 6'031 respondents.

Background Criteria

0.0.1 [B] Exchange Rate

International Financial Statistics Online February 2021 (IMF)

National sources

Period average.

0.0.2 [B] Population - market size

World Economic Outlook April 2022

National sources

Mid-year estimates. Croatia: new census in 2011 with a new methodology. India: break in series in 2011. Iceland, Romania as of January 1. Jordan: series have been revised according to the the new Population and Housing Census published in 2016. End of year population for 2019 and 2020. Lithuania: break in series 2011 - census revised population figure downwards by 10% (emigration to EU over past decade). Philippines: Projected population (medium assumption) excluding for 2015, which is based on the 2015 Census. Portugal: methodological change in 2011. Russia: including Crimea as of 2015. UAE: re-estimation of the national population was made by the National Bureau of Statistics in 2010 (consequent increase as of 2008).

Provisional data or estimates for most recent year. Malaysia: Data for 2021 is sum of 4 quarters. Taiwan, China: 2019 and 2020 data are revised according to the annual revisions released by DGBAS in November 2021.

Factor 1: Investment & Development

1.01 Total public expenditure on education

IMF Government Finance Statistics

Eurostat March 2022

UNESCO <http://stats.uis.unesco.org>

National sources

Total general (local, regional and central) government expenditure in educational institutions (current and capital). It excludes transfers to private entities such as subsidies to households and students, but includes expenditure funded by transfers from international sources to government. It includes pre-primary, primary, secondary all levels and tertiary public institutions. Chile and Jordan: Budgetary central government. Philippines: Includes expenditure for items other than basic and higher education such as vocational education, culture and sports.

1.02 Total public exp. on education per student

IMF Government Finance Statistics

Eurostat March 2022

UNESCO <http://stats.uis.unesco.org>

National sources

Total general (local, regional and central) government expenditure in educational institutions (current and capital). It excludes transfers to private entities such as subsidies to households and students, but includes expenditure funded by transfers from international sources to government. It includes pre-primary, primary, secondary all levels and tertiary public institutions. Chile and Jordan: Budgetary central government. Philippines: Includes expenditure for items other than basic and higher education such as vocational education, culture and sports.

1.03 Pupil-teacher ratio (primary education)UNESCO <http://stats.uis.unesco.org>

OECD Education at a Glance 2022

National sources

For public and private institutions, based on full-time equivalent. Primary education (ISCED level 1): level of which the main function is to provide the basic elements of education at such establishments as elementary schools, primary schools. The ratio of students to teaching staff is calculated as the total number of full-time equivalent students divided by the total number of full-time equivalent educational personnel. Teaching staff refers to professional personnel directly involved in teaching students. The classification includes classroom teachers; special education teacher; and other teachers who work with students as a whole class in a classroom, in small groups in a resource room, or in one-to-one teaching inside a regular classroom. Teaching staff also includes chairpersons of departments whose duties include some amount of teaching, but it does not include non-professional personnel who support teachers in providing instructions to students, such as teacher's aides and other paraprofessional personnel. Data are UNESCO or OECD estimates and from national statistics. Brazil, Bulgaria, China, Cyprus, Greece, Hong Kong SAR, Jordan, Kazakhstan, Mongolia, Peru, Philippines, Qatar, Romania, Saudi Arabia, Singapore, South Africa, Thailand, UAE and Ukraine: based on headcounts. Canada and Slovenia: Include data from another category.

1.04 Pupil-teacher ratio (secondary education)UNESCO <http://stats.uis.unesco.org>

OECD Education at a Glance 2022

National sources

For public and private institutions, based on full-time equivalent. Secondary education (ISCED levels 2 and 3): level providing general and/or specialized instruction at middle schools, secondary schools, high schools, teacher training schools and schools of a vocational or technical nature. The ratio of students to teaching staff is calculated as the total number of full-time equivalent students divided by the total number of full-time equivalent educational personnel. Teaching staff refers to professional personnel directly involved in teaching students. The classification includes classroom teachers; special education teacher; and other teachers who work with students as a whole class in a classroom, in small groups in a resource room, or in one-to-one teaching inside a regular classroom. Teaching staff also includes chairpersons of departments whose duties include some amount of teaching, but it does not include non-professional personnel who support teachers in providing instructions to students, such as teacher's aides and other paraprofessional personnel. Data are UNESCO or OECD estimates and from national statistics. Brazil, China, Cyprus, Hong Kong, Jordan, Kazakhstan, Peru, Philippines, Qatar, Romania, Saudi Arabia, Singapore, Thailand, UAE, Ukraine and Venezuela: Based on headcounts. Australia: general programs only. Bulgaria, Canada: upper secondary only. Estonia, Italy, Japan, Portugal, Switzerland and United Kingdom: Include data from another category. Iceland: lower secondary only.

1.07 Female labor force

OECD (2022), Main Economic Indicators - complete database

National sources

Estimates for the most recent year. Austria: break in series in 2008. Denmark: break in series in 2009. Hong Kong SAR: data have been revised based on the revised population figures since 2016. Malaysia: break in series in 2010. Philippines: 2021 data are preliminary figures. Portugal: methodological change in 2011. Singapore: estimates from the Ministry of Manpower. Slovenia: Estimate based on quarterly data for 2021. Spain: break in series in 2005.

Factor 2: Appeal

2.01	Cost-of-living index MERCER Cost of Living survey 2021 www.mercer.com
	<p>Break in series in 2015: In the main city as of 2015, average of main cities in large countries (made by IMD WCC) or in the capital in smaller ones up to 2014. The Mercer survey covers 214 cities across five continents and measures the comparative cost of over 200 items in each location, including housing, transport, food, clothing, household goods and entertainment. It is the world's most comprehensive cost of living survey and is used to help multinational companies and governments determine compensation allowance for their expatriate employees. New York is used as the base city (=100) for the index and all cities are compared against New York. Currency movements are measured against the US dollar. The cost of housing - often the biggest expense for expats - plays an important part in determining where cities are ranked.</p> <p>Data is not always comparable over years (money fluctuations in 2010 and 2011).</p>
2.07 [7]	Remuneration in services professions UBS Prices and Earnings 2018 National sources
	<p>Figures are estimates remuneration paid in major cities. Gross annual income including possible supplementary benefits, such as bonuses, vacation pay, meal or housing allowances, or family assistance. Product Manager: manager in pharmaceutical, chemical or food industry, about five years of experience, tertiary educational degree, middle management, approximate age and status: 35, married. Primary school teacher: teaching for about 10 years in government-operated schools, approximate age and status: 35, married, two children. Secretary/Personal Assistant: secretary of a department manager in an industrial firm, at least five years of experience; knowledge of PCs and one foreign language, approximate age and status: 25, single. Call center agent: trained agent at an inbound call/service center in the telecommunications or technology sector, approximate age and status: 25, single. Nurse: Completed apprenticeship or studies, at least 10 years of experience, approx. age and status: 35, married, two children. Sales Assistant: Sales in ladies' apparel at a large department store, specialized training in sales, several years of experience, approx. age and status: 25, single. Iceland: These are averages for all workers in the appropriate group, not adjusted for experience, age and status.</p>
2.08 [4]	Remuneration of management HCM International Ltd, April 2021 National sources
	<p>Total remuneration: including annual base salary, annual short-term incentive bonus and long term incentive. Based on companies having a minimal turnover of US\$ 250 million. Chief Executive Officer: directs all company's operations, including sales, marketing, manufacturing and support function; coordinates and provides guidance for the development and implementation of business strategies; optimizes market potential; provides long-term vision and leadership; identifies growth opportunities; assures organizational efficiency of the operations; builds long-term partnership with key accounts. Estonia: break in series in 2011 (change of source, data for earlier years are not comparable).</p>
2.09	Collected personal income tax OECD (2022), "Revenue Statistics: Comparative tables", OECD Tax Statistics (database) Government Finance Statistics 2022 National sources
	<p>Personal income taxes paid to general government. Russia: break in series in 2005 and 2007. Singapore: financial year.</p>
2.11	Exposure to particle pollution OECD (2022), "Green growth indicators", OECD Environment Statistics (database)
	<p>Particle pollution, also called particulate matter or PM, is a mixture of solids and liquid droplets floating in the air. Some particles are released directly from a specific source, while others form in complicated chemical reactions in the atmosphere. Particles less than 10 micrometers in diameter pose the greatest problems, because they can get deep into lungs and even the bloodstream. Cyprus: includes PM2.5 and PM10.</p>

2.11	Exposure to particle pollution OECD (2022), "Green growth indicators", OECD Environment Statistics (database) Particle pollution, also called particulate matter or PM, is a mixture of solids and liquid droplets floating in the air. Some particles are released directly from a specific source, while others form in complicated chemical reactions in the atmosphere. Particles less than 10 micrometers in diameter pose the greatest problems, because they can get deep into lungs and even the bloodstream. Cyprus: includes PM2.5 and PM10.
Factor 3: Readiness	
3.01	Labor force growth OECD (2022), Main Economic Indicators - complete database National sources Estimates for the most recent year. Austria: break in series in 2008. Brazil: break in series in 2014. Denmark: break in series in 2009. Hong Kong SAR: data have been revised based on the revised population figures since 2016. Lithuania: break in series 2011 - census revised labor force figure downwards by 10% (emigration to EU over past decade). Latvia: break in series in 2012. Malaysia: break in series in 2010. Philippines: 2021 data are preliminary figures . Portugal: methodological change in 2011. Singapore: estimates from the Ministry of Manpower. Slovenia: Estimate based on quarterly data for 2021. Spain: break in series in 2005.
3.07	Graduates in Sciences UNESCO National sources Share of graduates in Natural Sciences; Mathematics and Statistics; Information and Communication technologies; Engineering, manufacturing and construction. In tertiary education (ISCED2011 levels 5 to 8), both sexes (%). Japan: Data on information and communication technologies are included in other fields. Jordan: 2020 data used in 2019. Philippines: includes Medical and Allied Disciplines Graduates.
3.11	Student mobility inbound UNESCO http://stats.uis.unesco.org International mobile students (men and women) from abroad studying in a given country (in tertiary education). Data can refer to the school or financial year prior or after the reference year. Thailand : 2020 data have been used in 2019.
3.12 [3]	Educational assessment - PISA PISA 2018 (OECD) http://www.oecd.org/pisa/ The OECD's Programme for International Student Assessment (PISA) is a regular survey of 15-year olds which assesses aspects of their preparedness for adult life. PISA selects a sample of students that represents the full population of 15-year-old students in each participating country or education system, in both public and private schools. Mathematical literacy: an individual's capacity to identify and understand the role that mathematics plays in the world, to make well-founded judgments and to use and engage with mathematics in ways that meet the needs of that individual's life as a constructive, concerned and reflective citizen. Scientific literacy: an individual's scientific knowledge and use of that knowledge to identify questions, to acquire new knowledge, to explain scientific phenomena, and to draw evidence based conclusions about science-related issues, understanding of the characteristic features of science as a form of human knowledge and enquiry, awareness of how science and technology shape our material, intellectual, and cultural environments, and willingness to engage in science-related issues, and with the ideas of science, as a reflective citizen. Hong Kong (China), Netherlands, Portugal and United States: Data did not meet the PISA technical standards but were accepted as largely comparable. China: limited regions (B-S-J-Z); the municipalities of Beijing and Shanghai and the provinces of Jiangsu and Zhejiang participated.

About the International Institute for Management Development (IMD)

IMD is an independent academic institution with campuses in Lausanne and Singapore. For more than 75 years, IMD has been a pioneering force in developing leaders who transform organizations and contribute to society.

IMD has been ranked in the Top 3 of the FT's Executive Education Rankings (combined ranking for open & custom programs) since 2012. It has also been in the Top five for more than 15 consecutive years.

This consistency at the forefront of its industry is grounded in IMD's unique approach to creating "Real Learning. Real Impact". Led by an expert and diverse faculty, IMD strives to be the trusted learning partner of choice for ambitious individuals and organizations worldwide. *Challenging what is and inspiring what could be.*
